

Figure S1- Screening results of VLC80 toward A549, NCI-H460, PC3, InCAP, HT29, SW480, MCF7, and MDA-MB-231 at 2-200 $\mu\text{g} \cdot \text{ml}^{-1}$ after 48 hrs incubation. Data obtained from 3 biological repeats and presented as mean $\pm$ SE. Statistically analyzed with one-way ANOVA followed by a Tukey HSD means comparison test (* $P < 0.05$, ** $P < 0.01$, *** $P < 0.001$, **** $P < 0.0001$).
