Supplementary Information

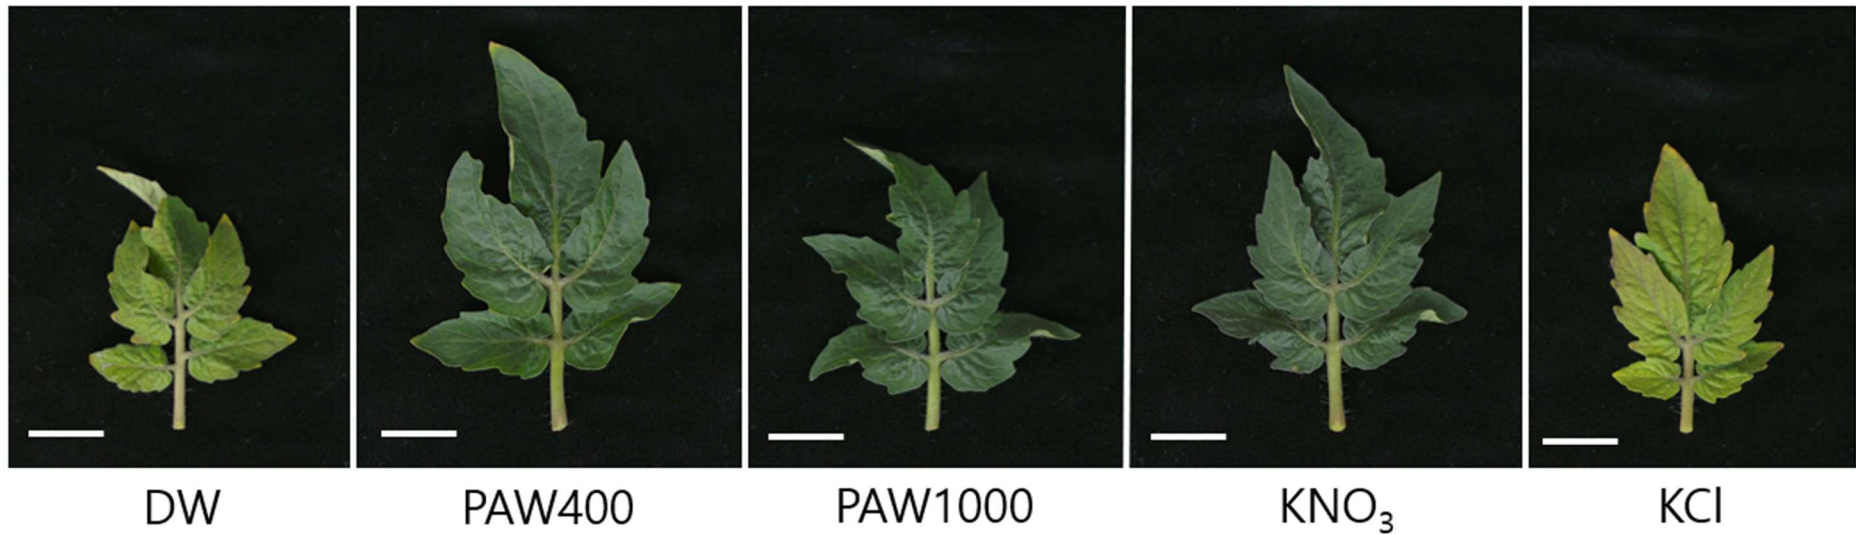

Supplementary Figure S1. Germination rate in deionized water (DW), PAW400, PAW1000, KNO₃, and KCl.

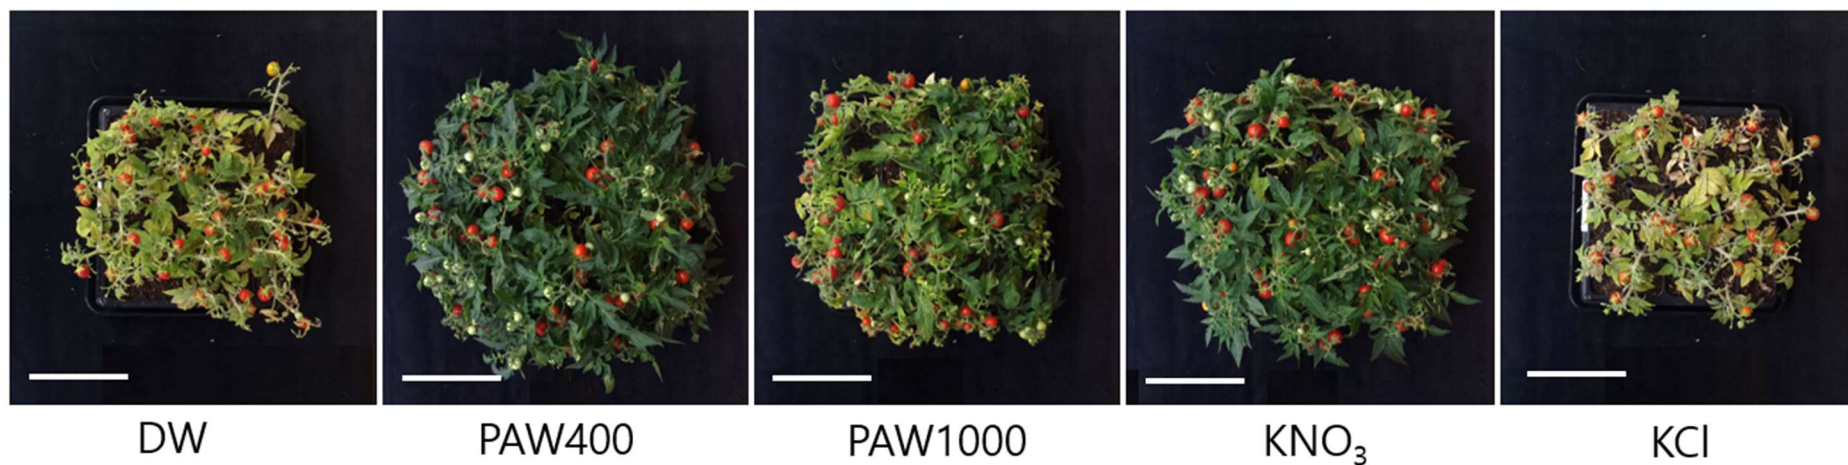

Supplementary Figure S2. Phenotype of plants during the vegetative stage.

Photographs were taken at 32 days after sowing. Scale bar: 5 cm.

Supplementary Figure S3. Phenotype of leaves during the vegetative stage.

Photographs were taken at 63 days after sowing, and the fifth leaf after the cotyledon was selected as the representative leaf. Scale bar: 2 cm.

Supplementary Figure S4. Phenotype of plant in the final stage under the growth conditions.

Photographs were taken at 14 weeks after sowing. Scale bar: 15 cm.
