

Additional file 2: Figure S2. Sample-individual distributions of length-sorted eccDNAs, related to Figure 2. The histograms indicate the eccDNA distributions up to a size of 10^4 bp. Represented are the results for (A) control (C1-10; blue) and (B) ALS (A1-9; red) samples after removal of mt-DNA sequences and after merging and exclusion of eccDNAs with less than 2 split reads.
