

Supplementary Figure S5. Binding sites of FUBP1 on SARS-CoV-2 RNA. The binding site of FUBP1 was predicted from iCLIP data in SARS-CoV-2 RNA. The upper panel shows the structure of the SARS-CoV-2 genome. The middle panel shows the predicted binding site of FUBP1 on SARS-CoV-2 RNA. The bottom panel shows the p-value and q-value of the binding motif of FUBP1.
