

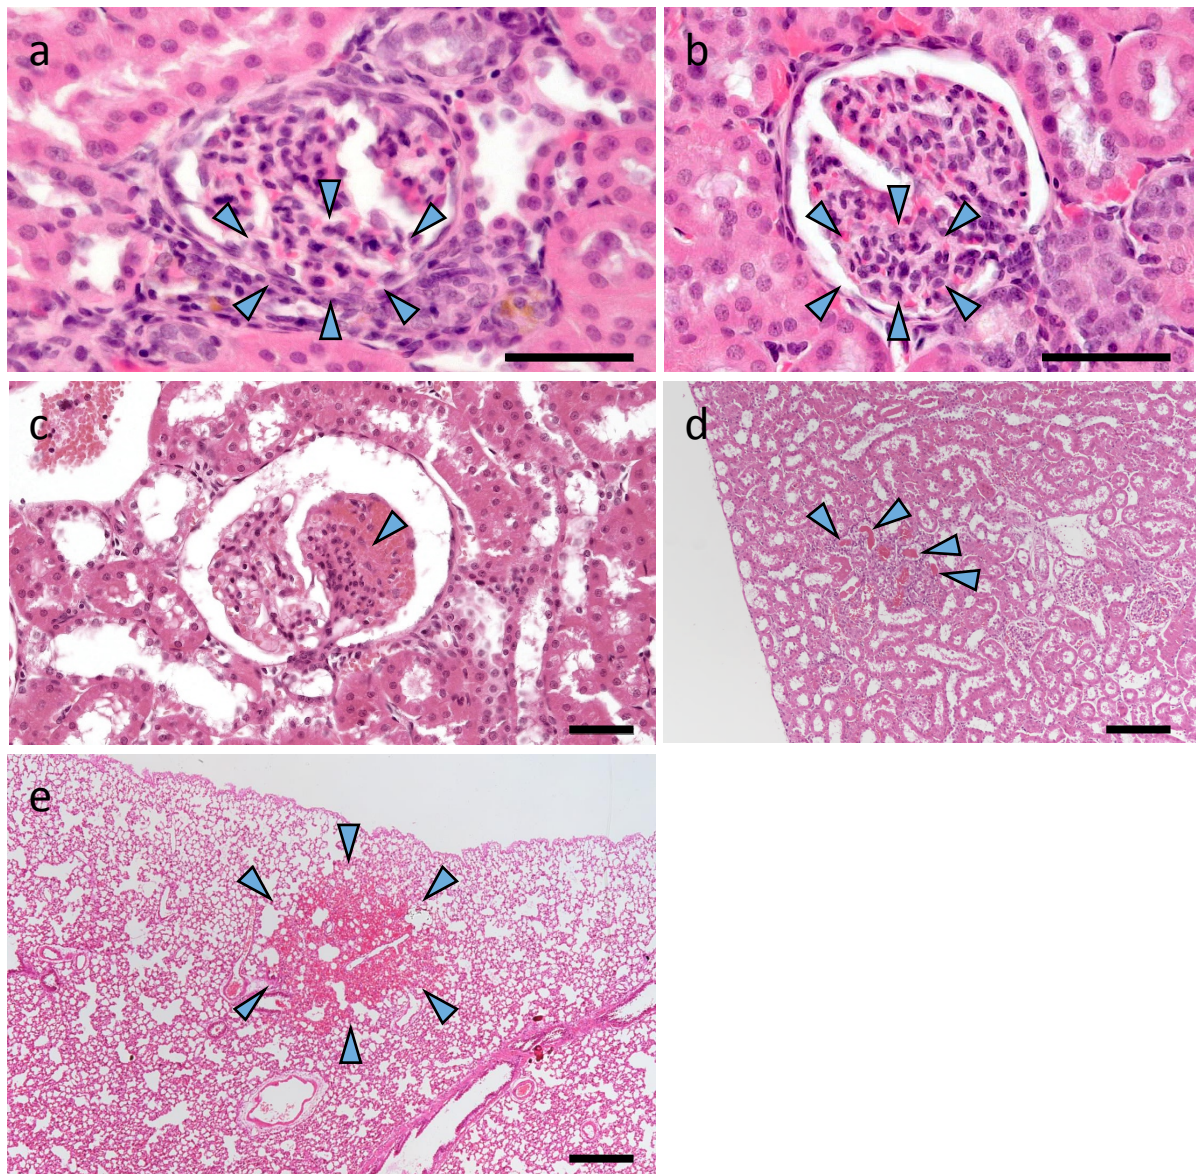

Figure S1. Representative findings in MPO-AAV rats.

MPO-AAV rats developed glomerulonephritis with crescent formation (**a**; bar, 50 μm), endocapillary proliferation (**b**; bar, 50 μm), and tuft necrosis (**c**; bar, 50 μm). Tubular erythrocyte casts representing glomerular bleeding were observed in the renal cortex (**d**; bar, 200 μm). Pulmonary hemorrhagic lesions were counted as regional alveolar bleeding under a low-power field of view (**e**; bar, 200 μm).
