

This figure is a scatter plot representing a probability density function, likely a normal distribution. The x-axis is labeled with values -0.1, 0.0, and 0.1. The y-axis is labeled with values from 0 to 15 in increments of 1. The data points are small black dots that form a symmetric, bell-shaped curve centered at x = 0.0. The peak of the curve reaches a y-value of approximately 15. The distribution is very narrow, with most data points concentrated between x = -0.05 and x = 0.05. The plot is set against a light gray background with white grid lines.
