

Additional file 1 Landscape, social, and climatic conditions of the Czech Republic, where we investigated the relationship between numbers of forest fires and predictor variables characterizing climate, land cover, and human activity factors between 2006 and 2015. (a) digital elevation model; (b) major landcover categories; (c) annual mean temperature in the period 1961 to 1900; (d) mean annual precipitation totals in the period 1961 to 1900; and (e) population density.
