

Table S3 Subgroup analysis on the effect of core treatment on death after BAAI

Subgroup	Number of patients with or without death after BAAI [†]			P value
	Primary operation	Secondary operation	Conservative observation	
Lower limb ischemia +	6 / 29	0 / 7	2 / 0 [‡]	0.020
Cardiopulmonary arrest +	1 / 0	0 / 0	0 / 1	>0.999
Injuries to other parts of body +	3 / 17	0 / 5	2 / 0 [‡]	0.035

BAAI: blunt abdominal aortic injury

[†]Expressed in: number of patients with death after BAAI / number of patients without death after BAAI; [‡]Mortality in this group differed significantly from the other two groups respectively
