

Supplementary Figure 4. Analysis of fluctuation of cell components in blood using methylation data. Six different blood cells (CD8+: CD8+ T-cells, CD4+: CD4+ T-cells, NK: Natural Killer cells, Bcell: B-cells, Mono: Monocytes, Gran: Granulocytes) were analyzed by one-way ANOVA test. Components fraction at each visit (x axis) was showed in y axis. Participants were separated by black and grey colors.
