

Table 1. Main clinical research field targeted in the included systematic reviews.

| <b>Research field</b>                | <b>n (%)</b>      |
|--------------------------------------|-------------------|
| General and Internal Medicine        | 26 (37.1)         |
| Rheumatology                         | 16 (22.9)         |
| Cardiovascular System and Cardiology | 10 (14.3)         |
| Respiratory System                   | 10 (14.3)         |
| Psychiatry                           | 2 (2.9)           |
| Nutrition and Dietetics              | 1 (1.4)           |
| Pathology                            | 1 (1.4)           |
| Pharmacology and Pharmacy            | 1 (1.4)           |
| Transplantation                      | 1 (1.4)           |
| NA                                   | 2 (2.9)           |
| <b>Total</b>                         | <b>70 (100.0)</b> |

NA, unclear.

Table 2. Type of systematic reviews included according to Munn et al. <sup>(12)</sup> criteria.

| <b>Type of reviews</b>       | <b>n (%)</b>      |
|------------------------------|-------------------|
| Effectiveness/Efficacy       | 28 (40.0)         |
| Expert opinion and/or policy | 15 (21.4)         |
| Prognostic                   | 11 (15.7)         |
| Prevalence                   | 8 (11.4)          |
| Diagnostic Test Accuracy     | 5 (7.1)           |
| Costs/Economic evaluation    | 1 (1.4)           |
| Etiology and/or risk         | 1 (1.4)           |
| Experimental (qualitative)   | 1 (1.4)           |
| <b>Total</b>                 | <b>70 (100.0)</b> |
