

Surface temperature EOBS V21

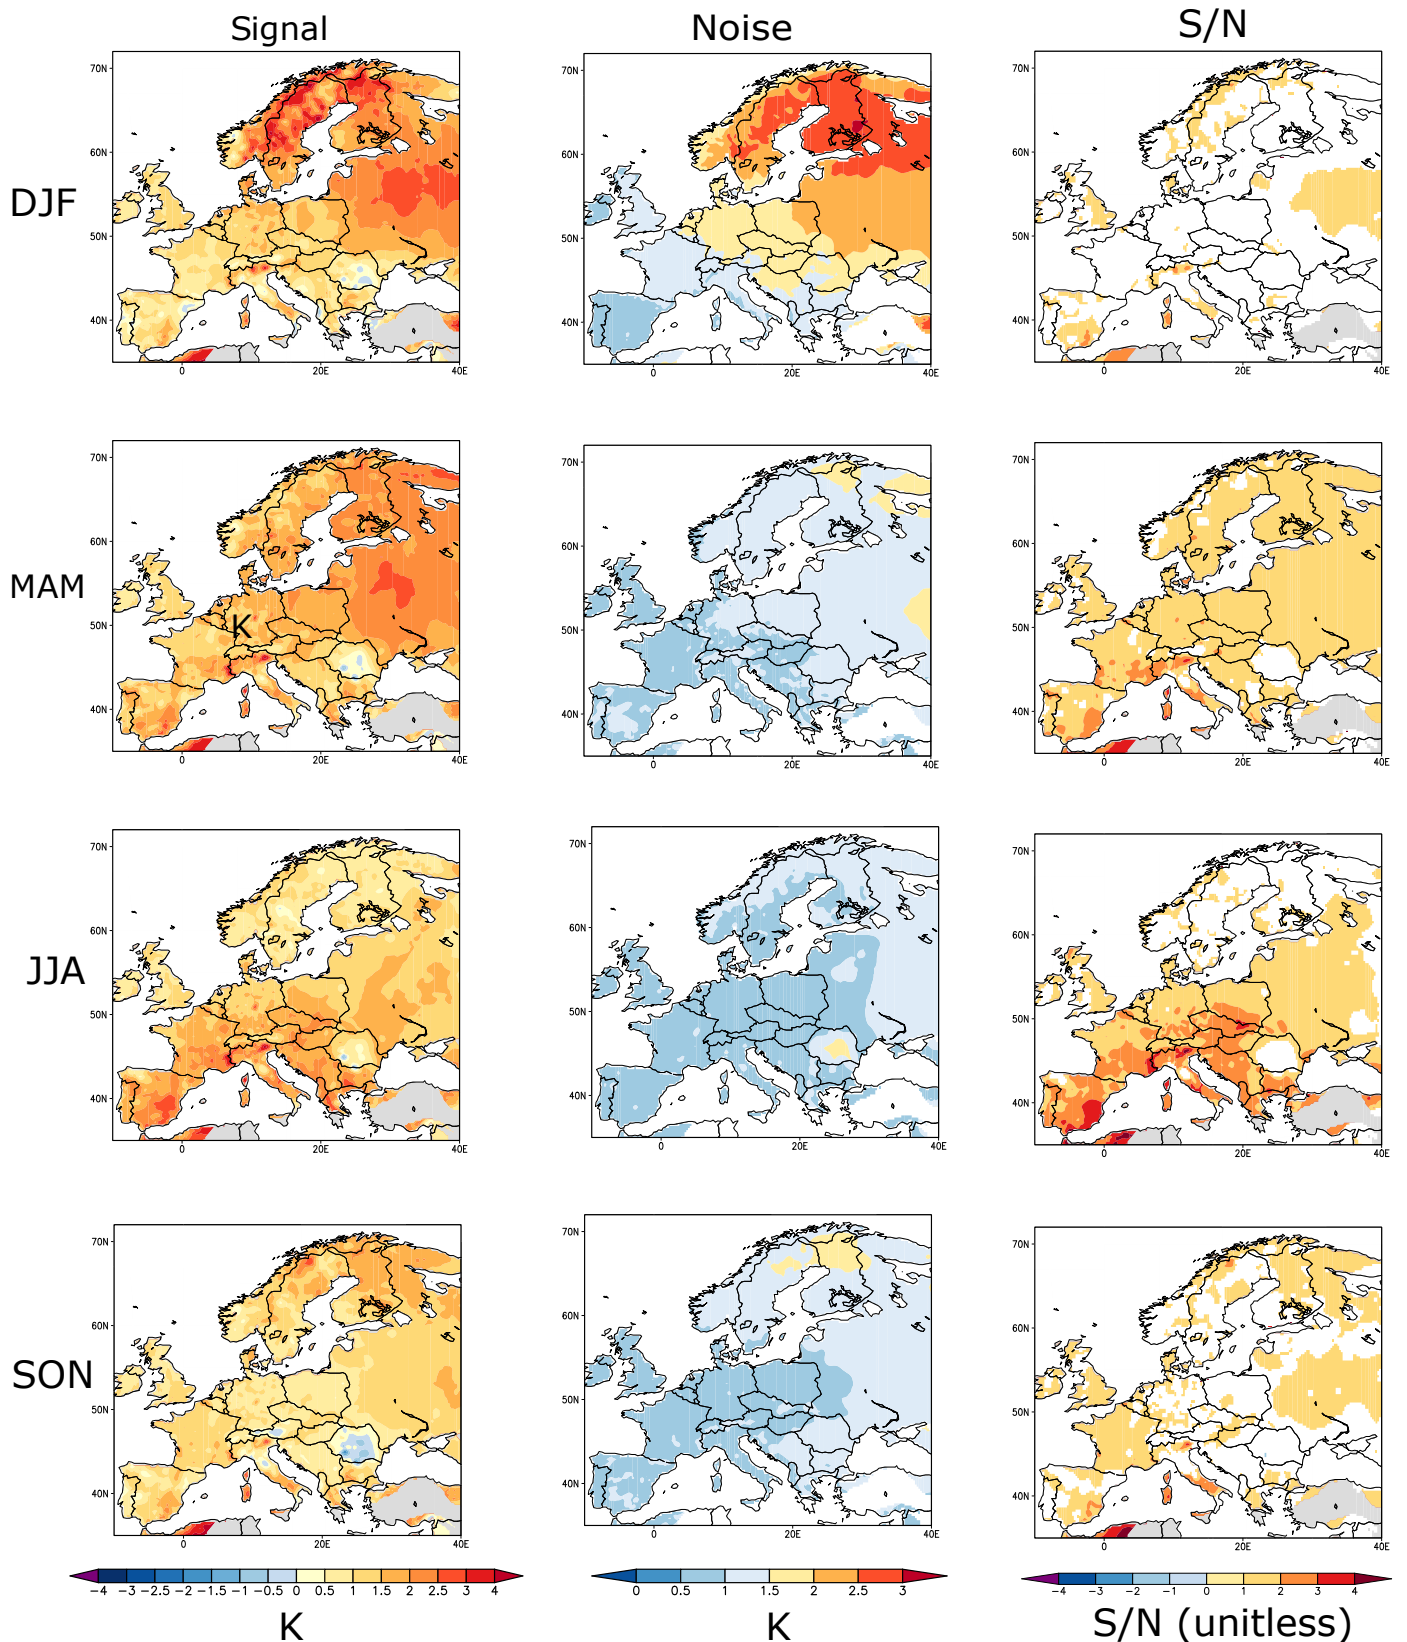

Figure S1: Signal (K), noise (K), and signal-to-noise ratio (S/N) of seasonally averaged surface temperature anomalies (1951-2016) in the EOBS V21 dataset. Grey regions indicate a lack of sufficient data. Stippling in the signal plots (left column) indicates signal values statistically significantly different from zero. Only S/N values statistically significantly from zero are shown (right column).
