

Western Blot Original Images

We performed following experiments in article with cropped gels. All original images were showed as follows: “Time” represents the time of transport. This figure was showed the result of goats from three groups. This interpretation is also applied to the following all figures. All gels were cut to specific lengths prior to incubation with primary antibodies, but this did not affect the integrity of the experimental results.

In particular, the gels or impressions on some of the images were incomplete, this is due to some deviations in the placement of the samples during the development process and some differences in the way the samples were added, but this does not affect the integrity of the experiment.

1. Cell apoptosis(Fig.4A)

2. Cell autophagy(Fig.7A)
