

Figure S4A

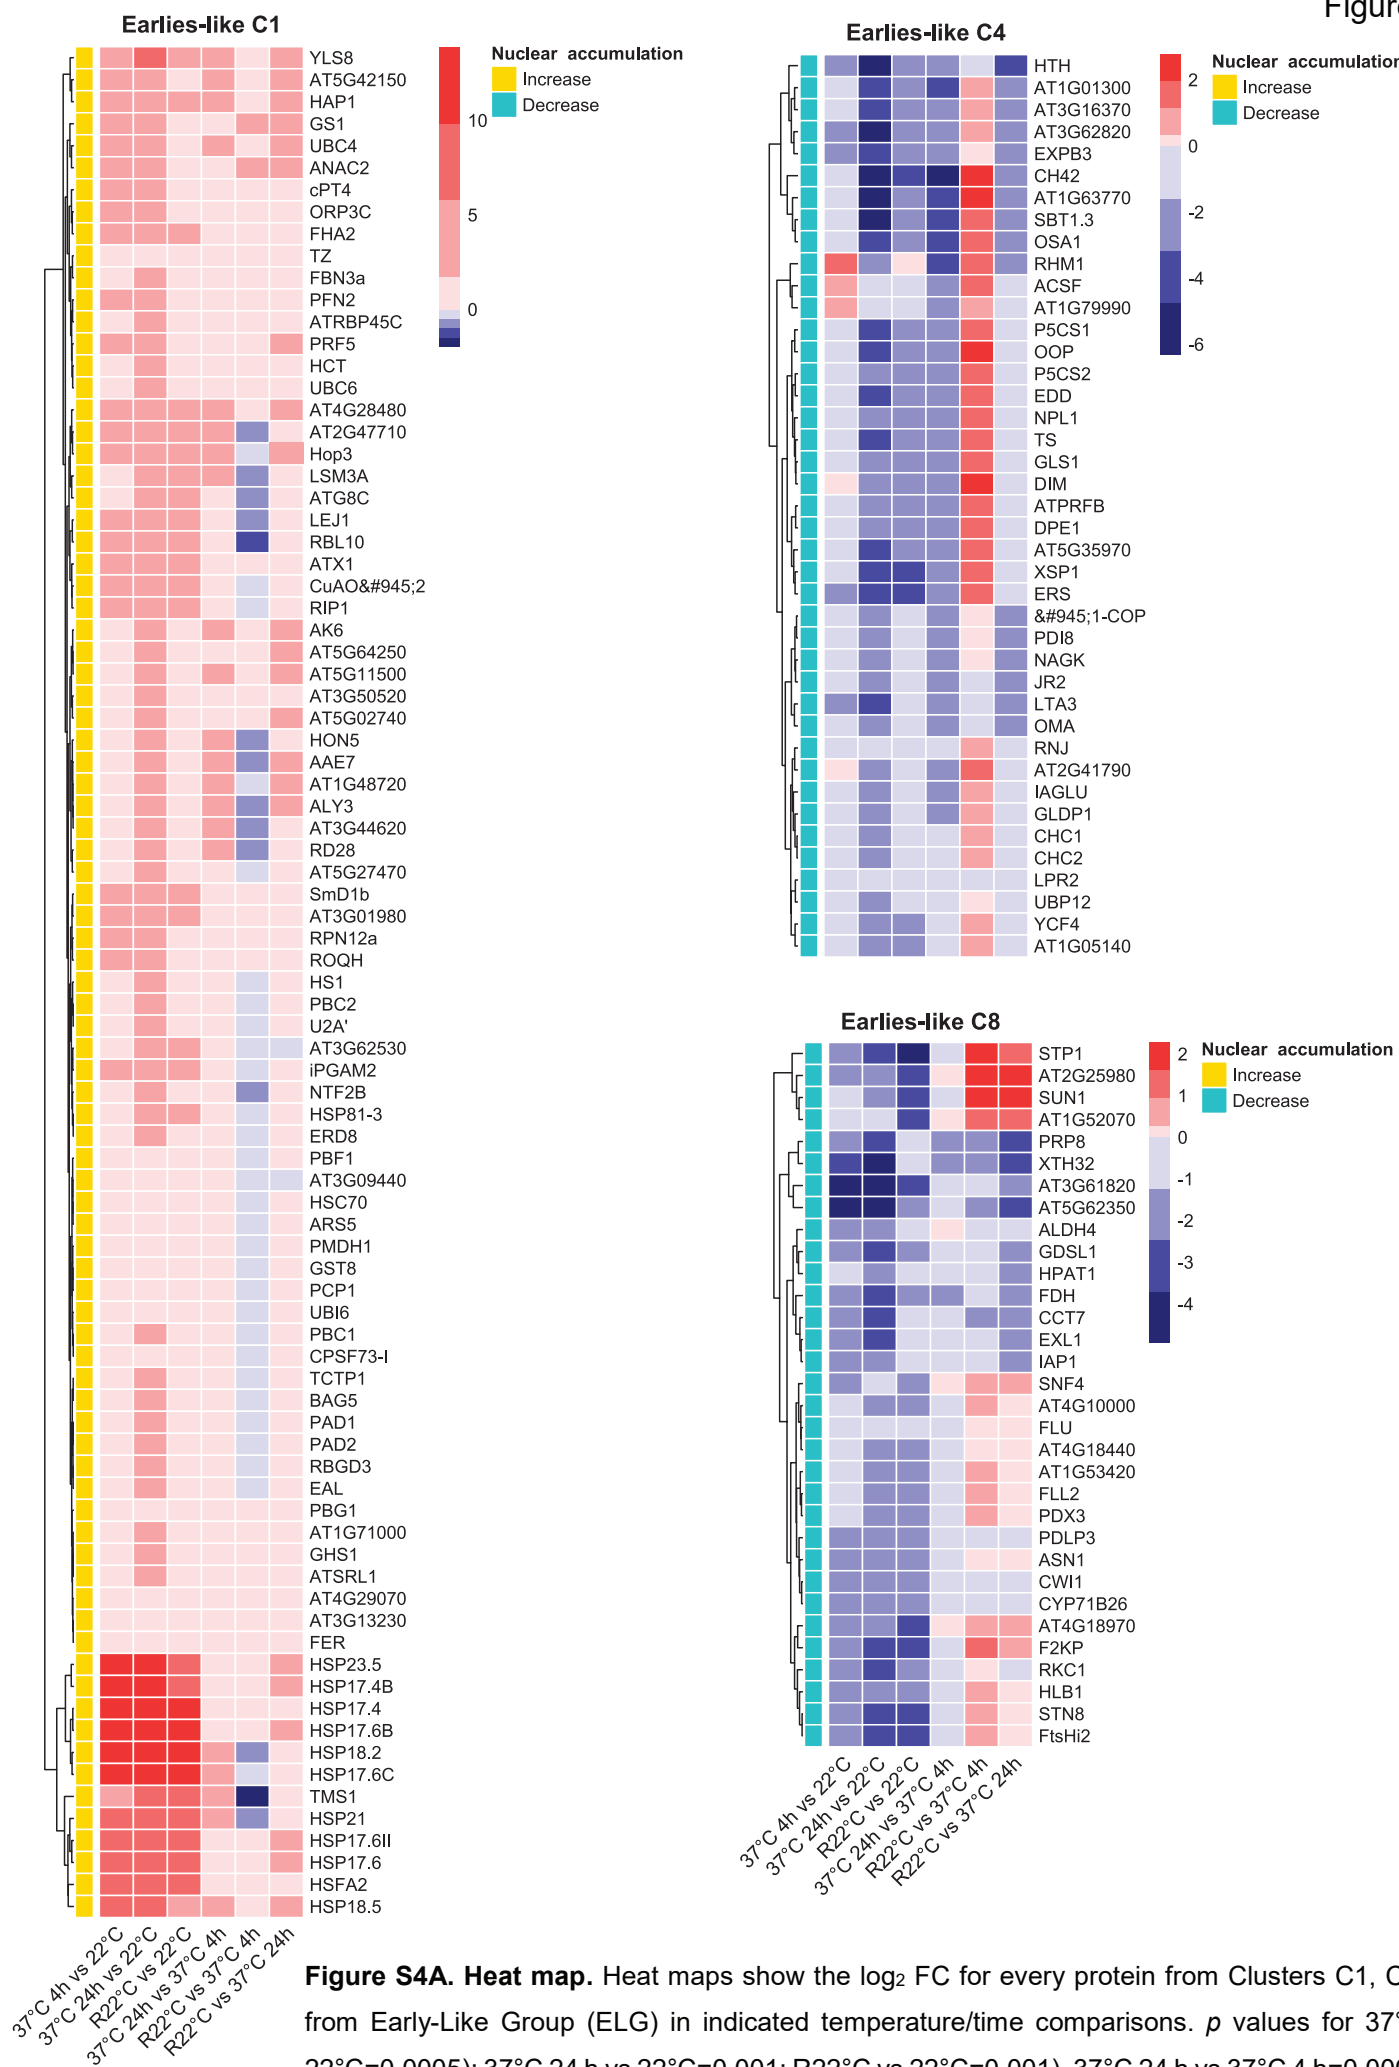

Figure S4A. Heat map. Heat maps show the log₂ FC for every protein from Clusters C1, C4 and C8 from Early-Like Group (ELG) in indicated temperature/time comparisons. *p* values for 37°C 4 h vs 22°C=0.0005; 37°C 24 h vs 22°C=0.001; R22°C vs 22°C=0.001), 37°C 24 h vs 37°C 4 h=0.0004, R22°C vs 37°C 4 h = 0.0007 and R22°C vs 37°C 24 h= 0.0005. FDR = 0.98-1.14%. Proteins whose nuclear abundance increases or decreases during exposure to 37°C are shown in yellow and blue respectively.
