

Supplementary Material Table 2. Coefficients of univariate logistic regression analysis for independent variables

variables	estimate	std.error	statistic	exp(coef) [confint]	p value
seminal vesicle	1.798	0.243	7.404	6.039 [3.825, 9.956]	<0.001
hypoechoic area	1.388	0.127	10.931	4.008 [3.130, 5.150]	<0.001
shape	1.606	0.150	10.679	4.982 [3.726, 6.722]	<0.001
border	1.755	0.134	13.095	5.781 [4.457, 7.538]	<0.001
prostate volume	-0.002	0.001	-1.104	0.998 [0.996, 1.001]	0.270
DRE	1.852	0.140	13.267	6.373 [4.863, 8.407]	<0.001
PSA	0.051	0.003	14.932	1.052 [1.045, 1.059]	<0.001
age	0.008	0.006	1.369	1.008 [0.999, 1.021]	0.171

DRE, digital rectal examination; PSA, prostate-specific antigen.

Note: variants with $p > 0.05$ are considered irrelative with prostate cancer.
