

Organ Involvement and Outcomes				
	Immunocompetent	Immunocompromised (all)	Immunosuppressive/steroid use	HIV-positive
n	8	21	9 (42.9%)	8 (38.1%)
Pulmonary involvement	2 (25%)	7 (33.3%)	5 (55.6%)	1 (12.5%)
Meningitis	6 (75%)	10 (47.6%)	2 (22.2%)	6 (75%)
Fungemia	2 (25%)	7 (33.3%)	2 (22.2%)	3 (37.5%)
Relapse	4 (50%)	1 (5%)	1 (11.1%)	0
Death	1 (12.5%)	5 (23.8%)	2 (22.2%)	1 (12.5%)

Table 2: Organ involvement and outcomes, including fungemia, relapse and death, in patients who are immunocompetent and immunocompromised. The immunocompromised group was further divided into patients using immunosuppressive medications and HIV-positive patients.
