

Supplementary Fig 2. Environmental conditions recorded during the course of the experiment in the large cages. Daily average temperature (a) and relative humidity (b) recorded on a 1-minute interval (solid black line) with upper and lower data recorded (grey shadings) show a very stable environment of 28°C (± 1.5) and 80% (± 5) relative humidity. No day-night variation in mean temperature or humidity was recorded (data not shown). c) Hourly average light intensity (in lux) recorded next to the bricks shelter from cage 3 (in the middle of the chamber) over 2 days with a 1-minute interval. Error bars indicate standard deviation.
