

Supp. Figure1. SFRP4 regulates FOXO1-dependent autophagy-related gene expression. GCs were isolated from immature (21-26 days-old) eCG-primed wild-type mice, and placed in culture without or with recombinant SFRP4 protein (20 µg/ml) for 3h (n = 4 replicates/treatment). Data were normalized to the housekeeping gene *Rpl19*. * : $P < 0.05$; **** : $P < 0.0001$.
