

Supplemental Figure 6: Rapid Immunoprofiling of T cells in the kidneys of the treatment cohort.

a Flow cytometry-based identification of chemokine receptor expression from T cells isolated from biopsy samples of patients with ANCA-GN (n=4). **b** Quantification of chemokine receptor expression CXCR3 (Th1/Tc1) and CCR6 (Th17/Tc17) from renal CD45⁺CD3⁺T cells. Bar graphs show mean, symbols represent individual data points.
