

Table 3: Number of patients in each ISS interval group and 30-day survival (%). The number of individuals within each ISS group is stratified according to mode of ECMO and indication, followed by 30-day survival.

ISS	Total	Type of ECMO		Indication for ECMO			
		VA	VV	ARDS	Pulmonary	Circulatory	Combined
15-24	2 (50%)	1(0%)	1(100%)	0 (0%)	2 (50%)	0 (0%)	0 (0%)
25-40	22 (60%)	10 (40%)	12 (75%)	11 (82%)	3 (67%)	2 (50%)	6 (17%)
41-49	6 (75%)	4 (50%)	2 (100%)	1 (100%)	2 (100%)	0 (0%)	3 (33%)
50-65	15 (28%)	10 (50%)	5 (60%)	3 (33%)	3 (100%)	1 (100%)	8 (38%)
66-75	8 (15%)	8 (13%)	0 (%)	0 (0%)	0 (0%)	3 (0%)	5 (20%)

Abbreviations: ARDS, acute respiratory distress syndrome; ECMO, extracorporeal membrane oxygenation; ISS, injury severity score; VA, veno-arterial; VV, venovenous
