

Table 6: Shows the frequency of complications (n) during hospital stay as well as the 30-day Survival in percent for each complication.

| Complication                   | n/N   | Percent survival |
|--------------------------------|-------|------------------|
| Severe Neurological Disability | 20/52 | 17%              |
| Hemorrhagic Shock              | 20/53 | 25%              |
| Bleeding Complications         | 16/53 | 31%              |
| SIRS                           | 19/53 | 47%              |
| Sepsis                         | 23/53 | 57%              |

**Abbreviations:** N, total group number; SIRS, Systemic Inflammatory Response Syndrome
