Approval Notice

PRINCIPAL INVESTIGATOR OF PROJECT: Zhou Xiaonong

TITLE OF PROJECT: Research on Pathogenic Mechanism and Prevention and Control
Intervention Technology of Important Threatening Human Parasites (2021YFC2300800)

INSTITUTE: National Institute of Parasitic Diseases, China CDC

Number: 2021019

The Ethical Review Committee of National Institute of Parasitic Diseases, Chinese Center for Disease Control and Prevention has reviewed the proposal of “Research on Pathogenic Mechanism and Prevention and Control Intervention Technology of Important Threatening Human Parasites, Topic 1: Mechanisms of pathogenic and immunosuppressive function of important parasite on host, Topic 2: Mechanisms of cross-species transmission of important parasites, Topic 3: Research on the molecular basis of co-evolution of important parasites and hosts, and Topic 4: Establishment of emulator and prediction modelling for important parasitic diseases and empirical investigation on precision intervention by ‘One health’ approach”. This project only deals with collecting elementary information about social, environmental, household and individual characteristics, collecting biological materials including blood, marrow, cerebrospinal fluid and feces samples of human beings. It is recognized that all those methods for survey and samples collecting will be well accepted by the local people, the right and the welfare of the subject are adequately protected and the potential risks are outweighed by potential benefits.
