

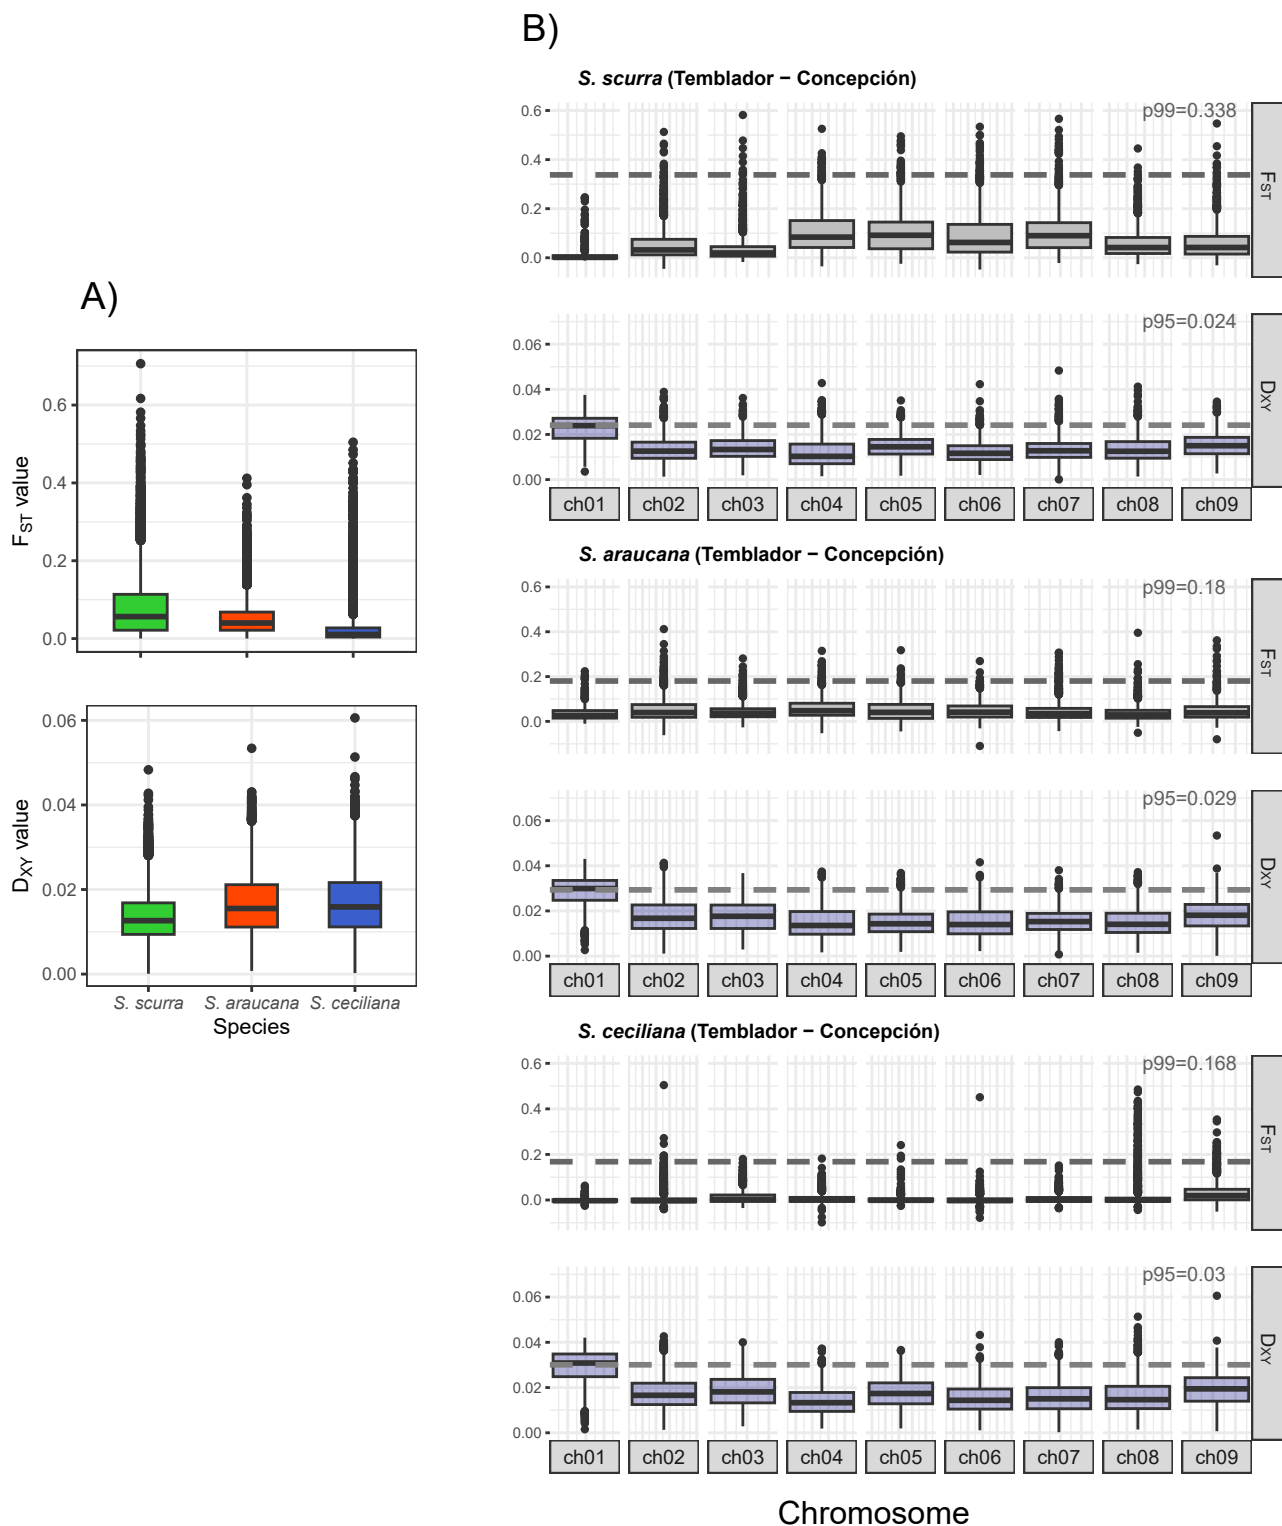

Figure S2. A) Box plot representing the distribution of F_{ST} values (upper panel) and D_{XY} values (lower panel) for the different species. B) Box plots of intra-specific divergence across the genome of limpets belonging to the genus *Scurria*. F_{ST} and D_{XY} are shown in the upper and lower panels of each comparison, respectively. The horizontal dashed lines in the upper and lower panels of each comparison represent the 99th and 95th percentiles of the F_{ST} and D_{XY} data distributions, respectively (gray line).
