

Supplemental Information

Article title: Creek system and regional patterns of *Juncus roemerianus* stress and links to salt marsh loss on the Florida Gulf Coast

Journal name: Wetlands

Author names: Stephanie A. Verhulst, Matthew P. Conlin, Peter N. Adams, Carrie Reinhardt Adams

Corresponding author: Carrie Reinhardt Adams, University of Florida, rein0050@ufl.edu

Online Resource 3. Relativized assessment of stress for the 12 creek systems based on averages of *Juncus* response variables and environmental factors (more detailed version of Figure 7 in the manuscript). Black bars indicate the average across all creeks, and circles represent mean values for each creek system. Creek symbols positioned left of the black bar indicate below average stress, and creek symbols to the right indicate greater than average stress.
