

Supplementary Figure 9. Glucose consumption and growth of isolated yeasts from grapes and raisins in 10% glucose-containing YNB medium. Comparison of consumed glucose (A) and cell growth (B) between yeasts from fresh grapes (n = 24, green) and raisins (n = 11, pink). Glucose concentrations of spent medium (C) and growth of cells (D) on Day 6 (n = 3, mean $\pm$ SD).
