Additional File 2: Individual age group histograms of favorable vaccination schedule shifts

Additional File 2 contains individual age group histograms of favorable vaccination schedule shifts compared to historic uptake, under six different initial VE and waning scenarios. Data points are states/seasons. On the x-axes, zero indicates the starting historic vaccination uptake week for each state and season. Negative numbers indicate early vaccination in weeks; positive numbers indicate delayed vaccination in weeks. The y-axes show the proportion of occurrences of a particular schedule shift for all states and seasons in our data set. Figure 1 shows age group 0-4, Figure 2 shows age group 5-24, Figure 3 shows age group 25-49, Figure 4 shows age group 50-64, and Figure 5 shows age group 65 and over.
