

Table 2. Site distribution model in the Neolithic period

	Sig.	B	Exp (B)	S.E	Wals	Df
Elevation	0.020	-0.007	0.993	0.003	5.454	4
Slope	0.017	-1.011	0.364	0.422	5.736	4
Slope aspect condition grades	0.130	1.089	2.973	0.720	2.287	4
Distance to water sources	0.031	-1.654	0.191	0.768	4.637	4

Note: Sig. denotes significance; B represents the coefficients of the respective variables at different classification levels in the model; Exp(B) is the dominance ratio; S.E. denotes standard error; Wals is the chi-square value; and Df represents degrees of freedom.
