

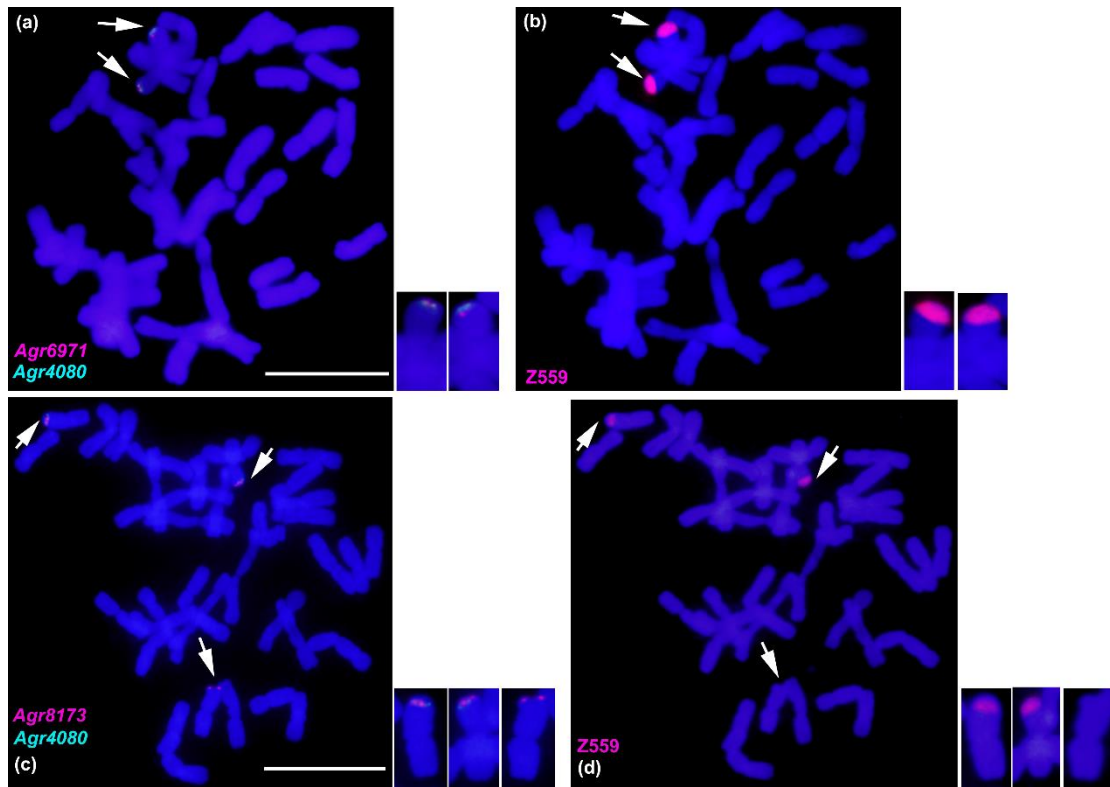

Fig. S5 FISH and GISH patterns of the translocation line WAT655 using the DNA of three genes and *A. cristatum* “Z559” as the probes. (a) and (b) showed that the signals of the probes *Agr6971* (red) and *Agr4080* (green) were simultaneously mapped to the overlapping zone of *A. cristatum* 6PS (0.81–1.00) of the translocation line WAT655, moreover, (c) and (d) showed that the signals of the probes *Agr8173* (red) and *Agr4080* (green) also were mapped to the overlapping zone. (scale bar = 10 μm)
