

Disease-free survival

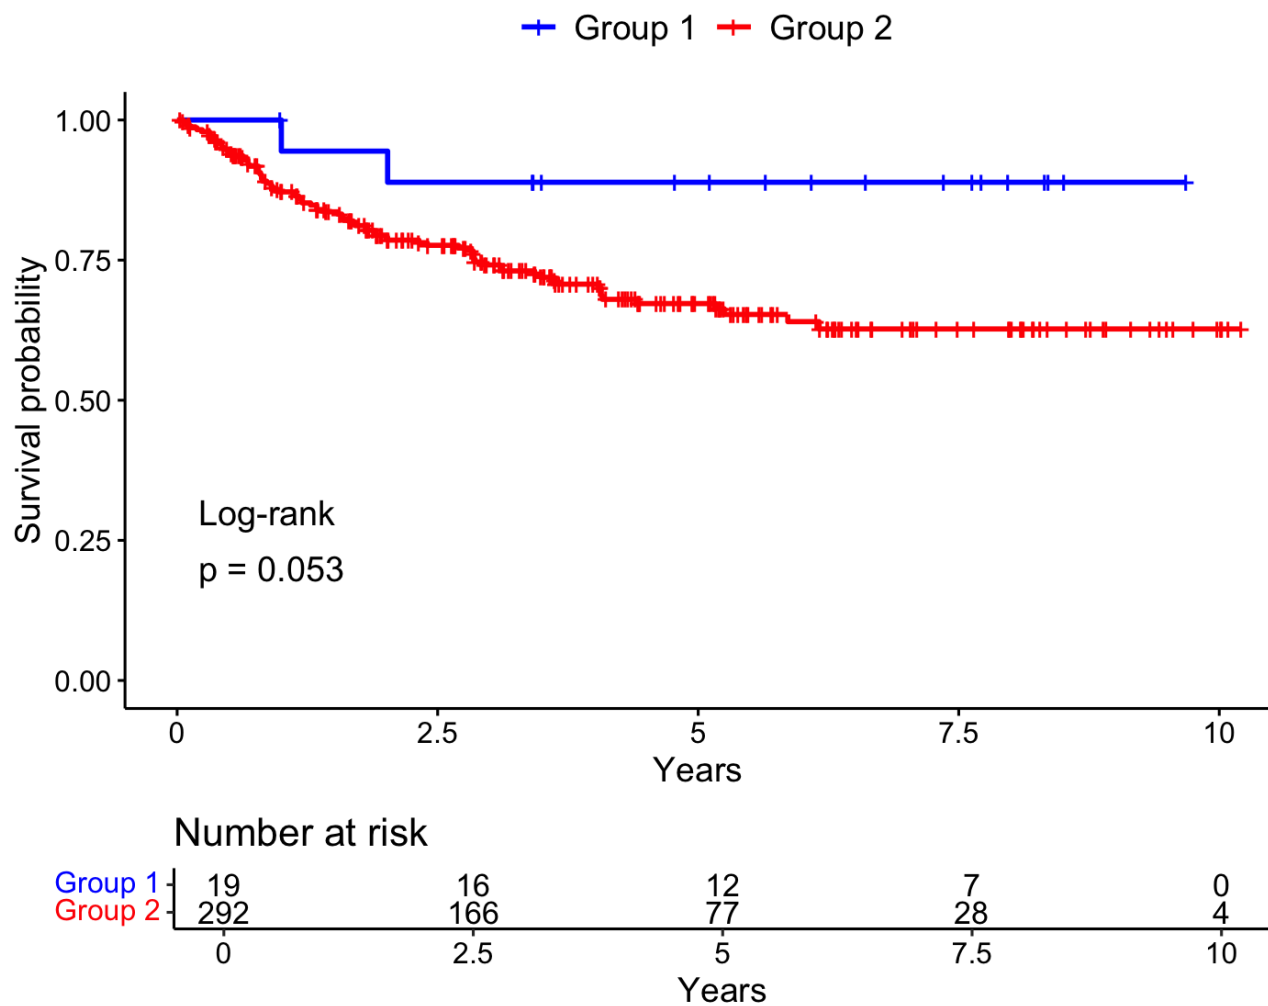

Figure 1. Kaplan-Meier curves and log-rank test comparing disease-free survival (DFS) between Group 1 and Group 2 tumours. Group 1 tumours are characterized by the simultaneous presence of the four most significant positive prognostic factors (stage I-II at diagnosis, absence of vascular invasion, NST or lobular histologic type and TILS $\geq$ 30%).

Overall survival

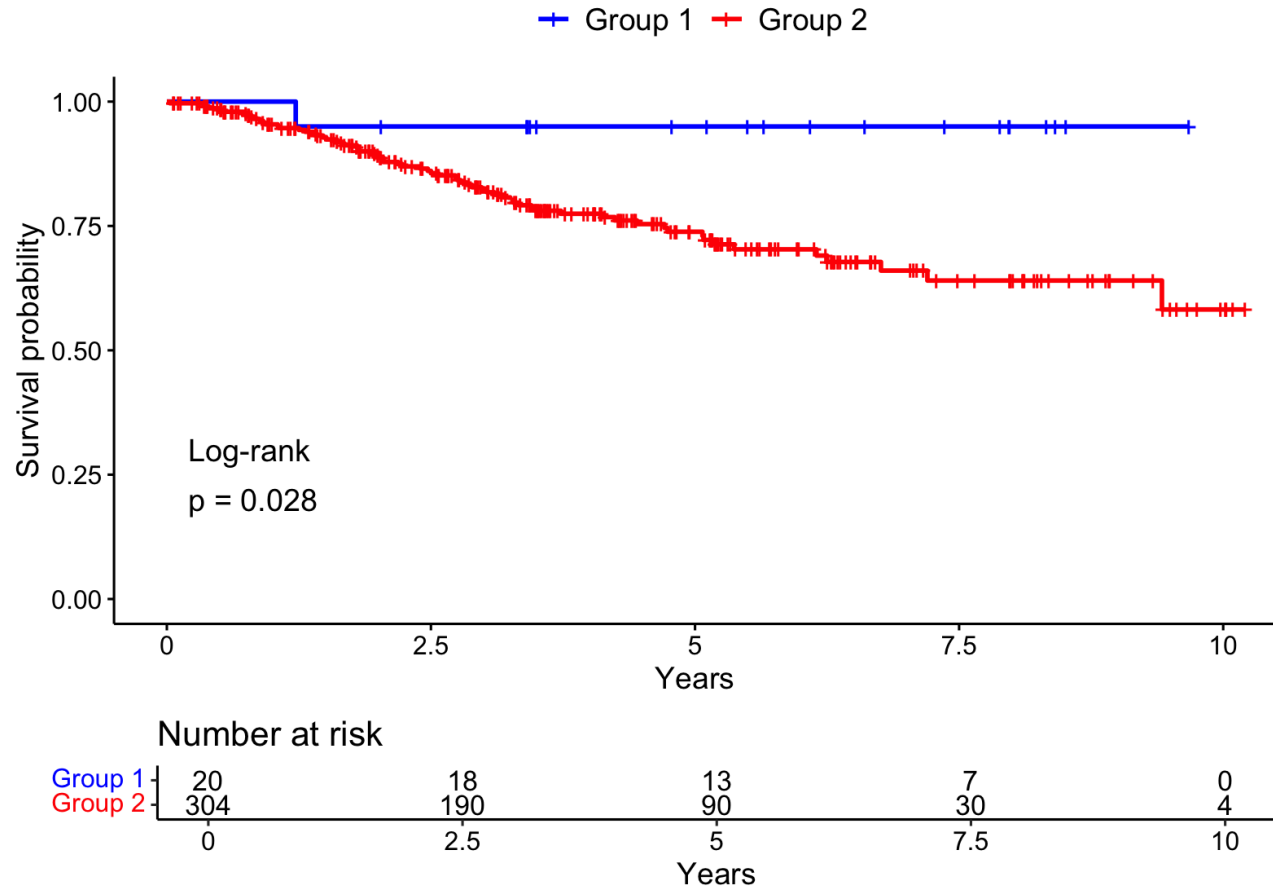

Figure 2. Kaplan-Meier curves and log-rank test comparing overall survival (OS) between Group 1 and Group 2 tumours. Group 1 tumours are characterized by the simultaneous presence of the four most significant positive prognostic factors (stage I-II at diagnosis, absence of vascular invasion, NST or lobular histologic type and TILS $\geq$ 30%).
