

## 1 Susceptibility patterns the microbes

3 Figure 1: Resistance patterns of the microbes

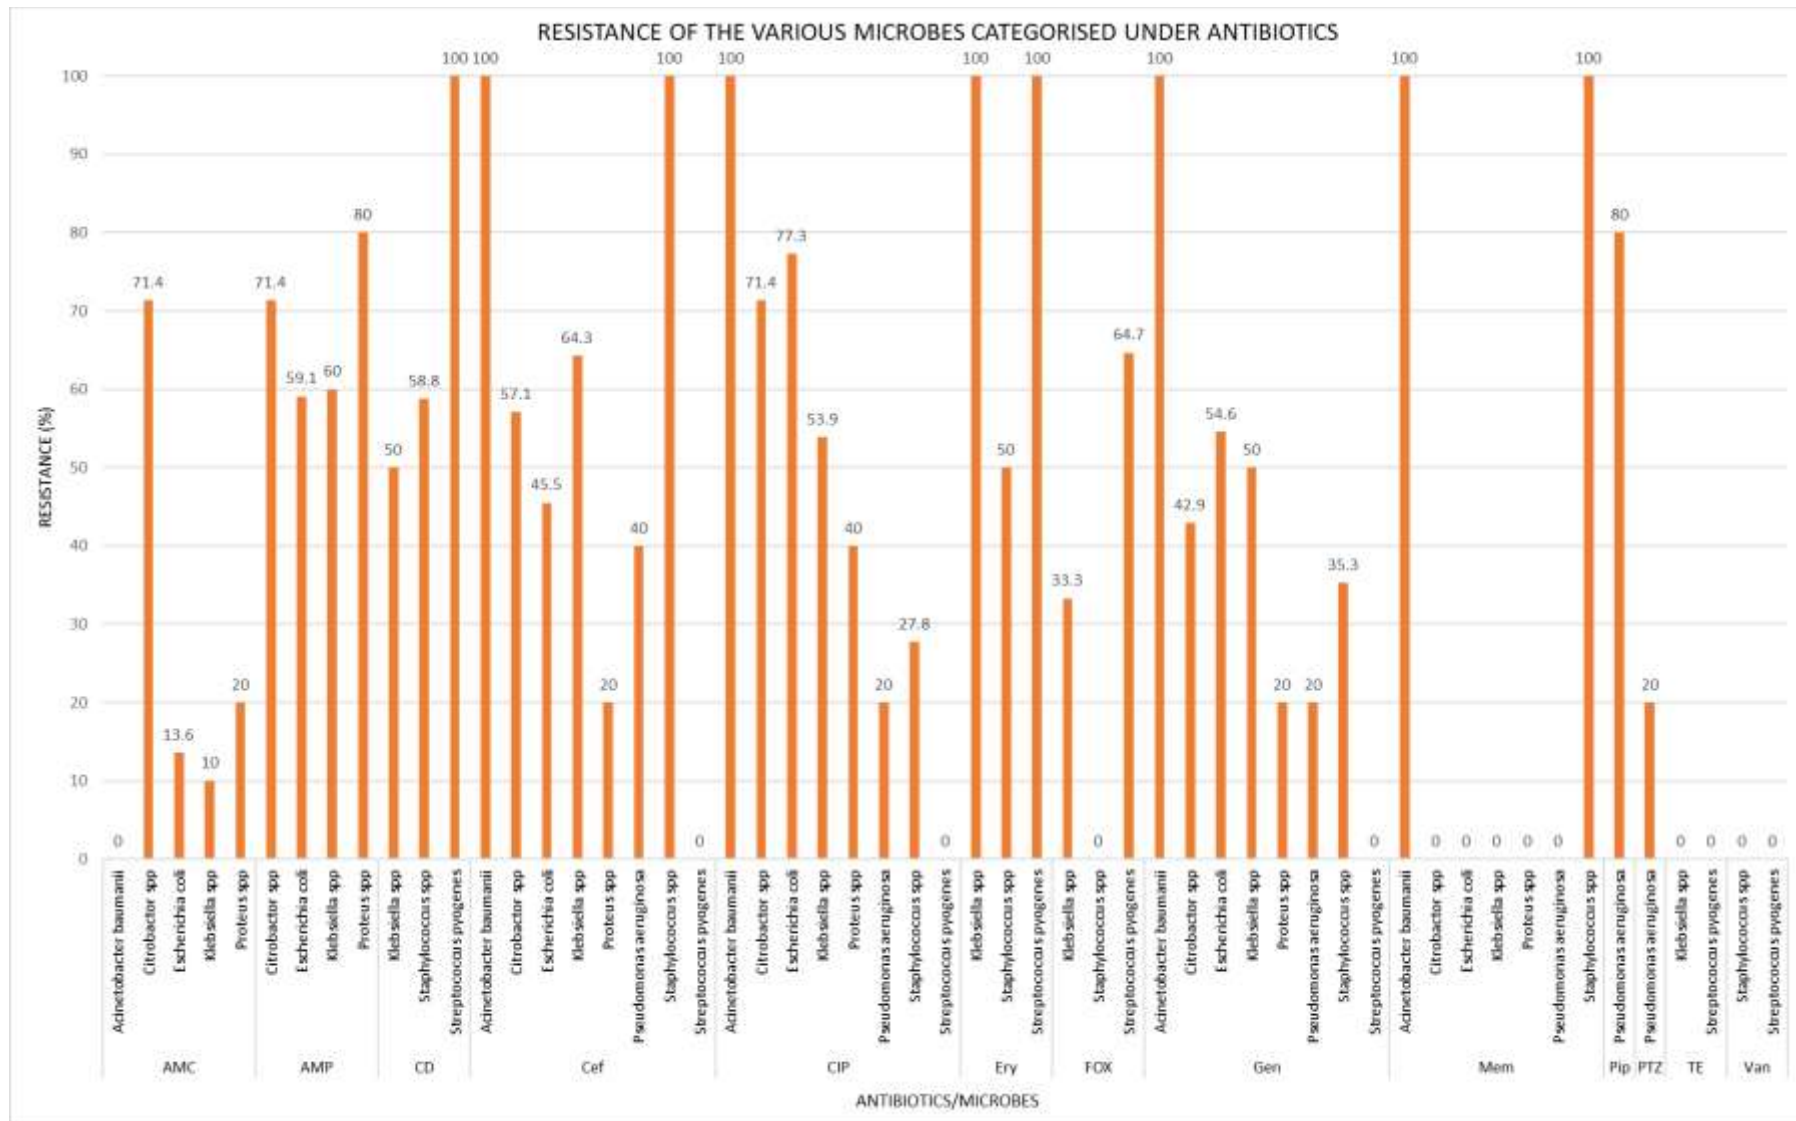

Figure 2: Susceptibility Patterns towards the Antibiotics

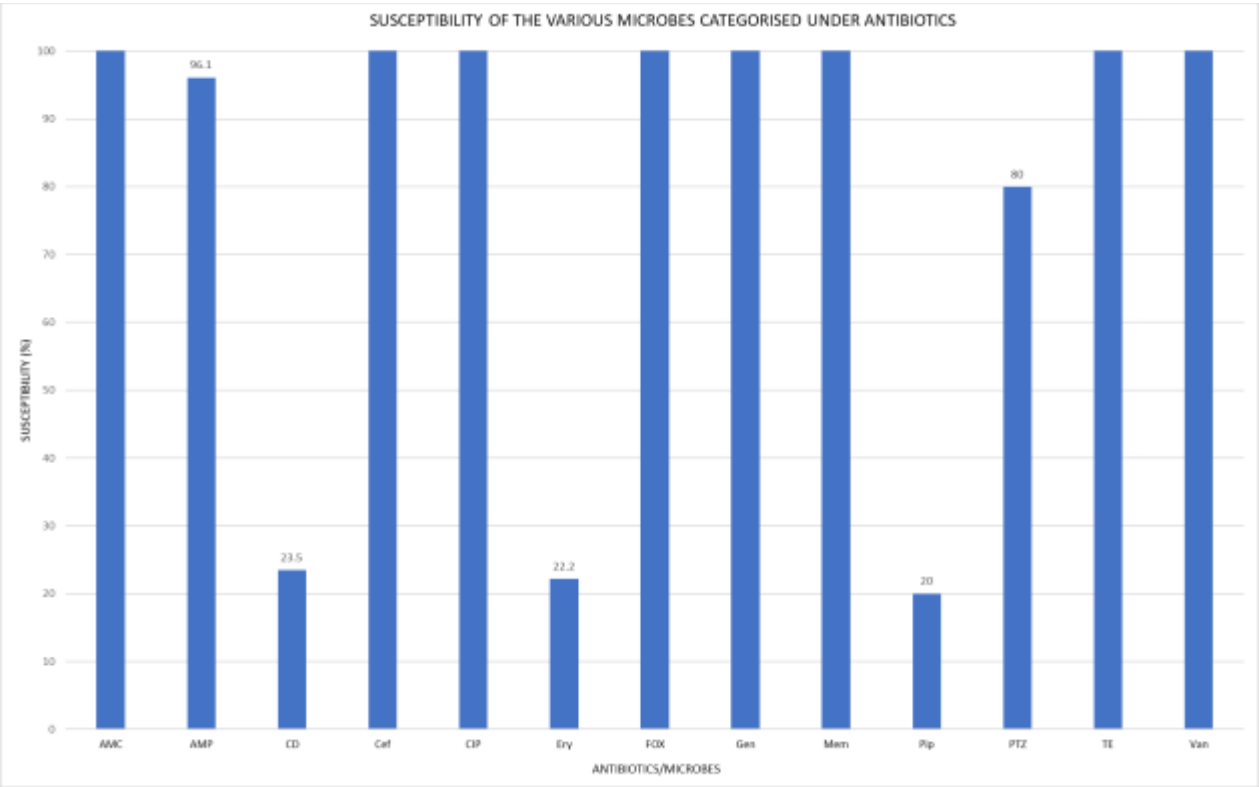

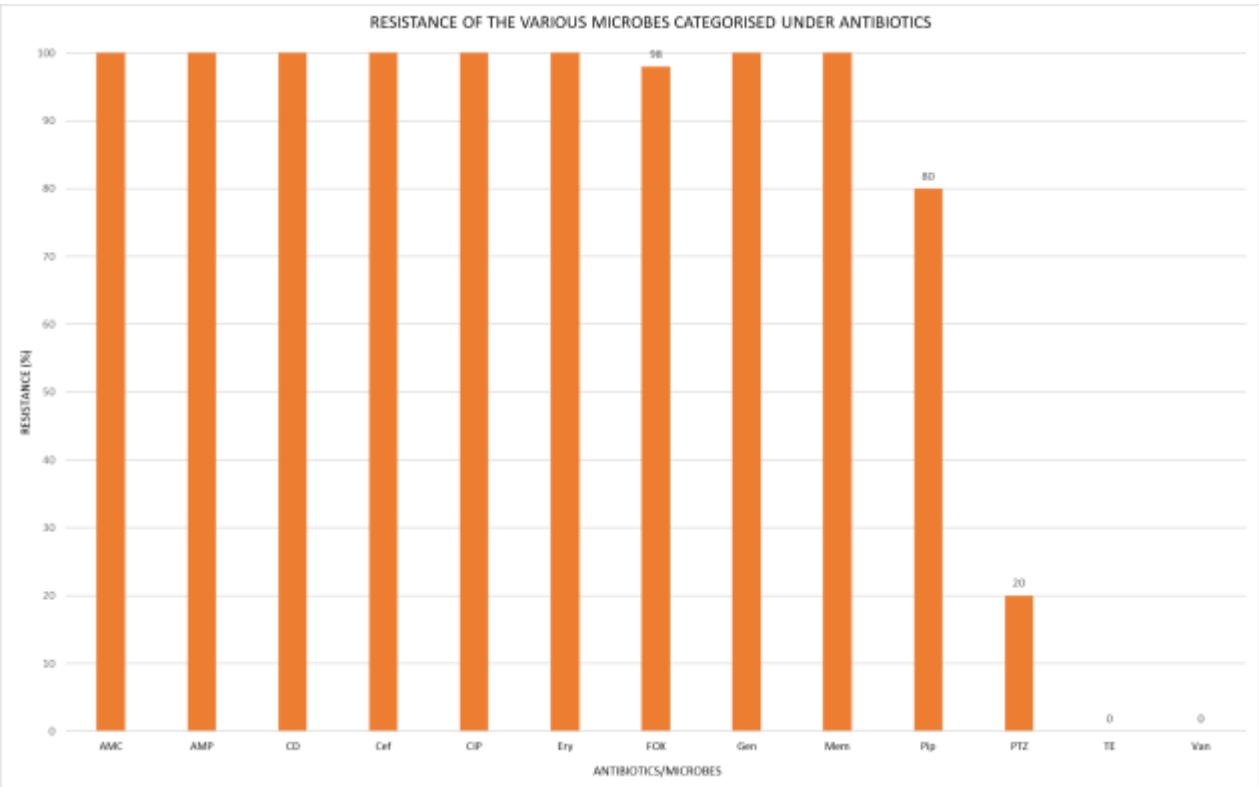

Figure 3: Resistance Patterns to the Antibiotics

In figure 2 and figure 4, shows the sensitivity patterns were meropenem, vancomycin, and Piperacillin tazobactam were more sensitive to most of the bacteria isolates from wound swabs.

In figure 3 and figure 5, these showed the resistance patterns, most antibiotics which had high resistance were Clindamycin, ampicillin, ceftriaxone, ciprofloxacin and amoxiclav
