

Supplementary Figure 1: A functional protein association network constructed from the top 10 IL1B co-expressing genes and the top 10 BLNK co-expressing genes using the String Database. ATP2B1-AS1 is an antisense RNA that does not encode a protein. Human FAM30A and IGHM are not available in the STRING Database (<https://string-db.org/>). The functional STRING association for SNX22 and SKG1 with this network has not yet been reported.
