

Supplemental Figure 1: Patients' Disposition

Supplemental Figure 1: WHO, World Health Organization; PV, Polycythemia Vera; HU, hydroxyurea; CSSs, Clinical Signs and Symptoms; HR-THRO, high-risk for previous thrombosis; HR-AGE, high-risk for age >60 years

Supplemental Table 1: Distribution of Additional Reasons to start hydroxyurea in patients without Clinical Signs and Symptoms.

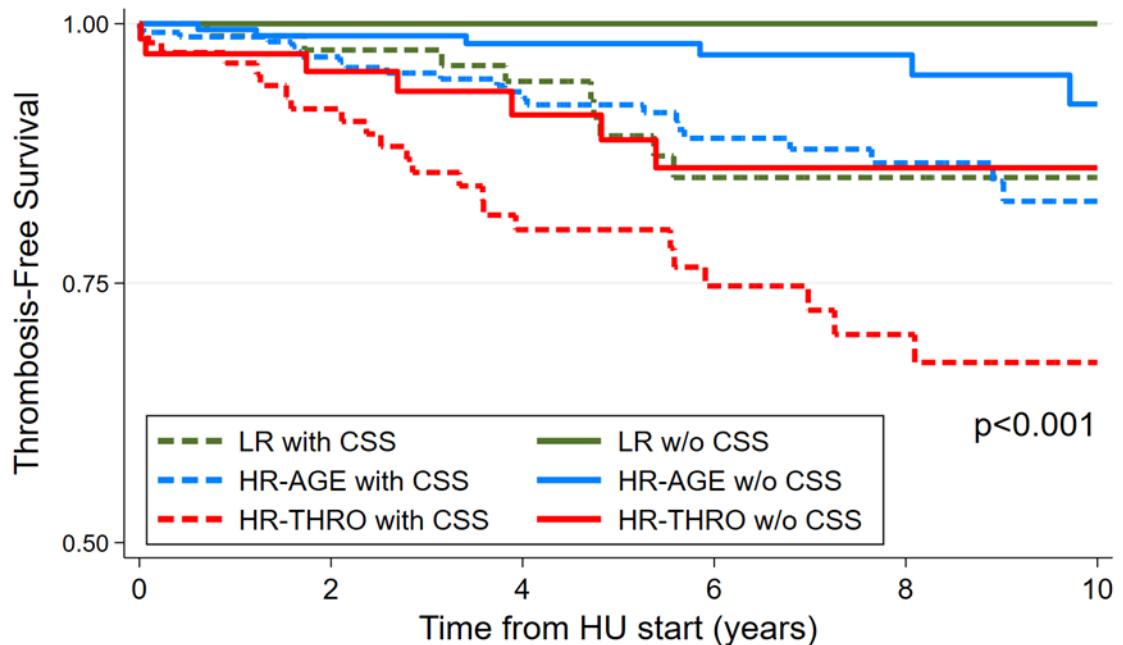

| | LR (n. 42) | HR (n. 252) | | p-value (LR vs. HR) |
|---|---------------|--------------------|--------------------|------------------------|
| | | HR-AGE (n. 183) | HR-THRO (n. 69) | |
| Palpable Spleen (2-5 cm BCM), n. (%) | 8 (19.1%) | 28 (11.1%) | | 0.15 |
| | | 16 (8.7%) | 12 (17.4%) | |
| Microvascular Disturbances, n. (%) | 24 (57.1%) | 195 (77.4%) | | 0.004 |
| | | 148 (80.9%) | 48 (69.6%) | |
| Mild Leukocytosis*, n. (%) | 13 (31.0%) | 64 (25.4%) | | 0.45 |
| | | 46 (25.1%) | 18 (26.1%) | |
| Mild Thrombocytosis°, n. (%) | 31 (73.8%) | 145 (57.5%) | | 0.05 |
| | | 112 (61.2%) | 33 (47.8%) | |
| Intermediate phlebotomies requirements§, n. (%) | 21 (50.0%) | 89 (35.3%) | | 0.13 |
| | | 68 (37.2%) | 21 (30.4%) | |

Supplemental Table 1: LR: low-risk (age <60 years and no previous thrombosis). HR: High-risk (age ≥60 years and/or a history of thromboembolism). HR-AGE (age ≥60 years). HR-THRO (previous thrombosis, regardless of age); *defined as leukocytes count >11 x10⁹/L at hydroxyurea start but not meeting CSS criteria; °defined as platelet count >450 but <1000 x10⁹/L at hydroxyurea start; § defined as ≥3 phlebotomies in the 12 months before hydroxyurea start.

Supplemental Table 2: Type and Incidence of Thromboses during treatment with hydroxyurea

| | Number of events | Number of patients (%) | Incidence rate, per 100 patient-years |
|---|------------------|------------------------|---------------------------------------|
| Overall Thromboses | 92 | 72 (9.7%) | 2.02 |
| Venous Thromboembolisms | 47 | 40 (5.4%) | 1.03 |
| <i>Deep vein thrombosis of the limbs with or without pulmonary embolism</i> | 10 | 10 (1.4%) | 0.22 |
| <i>Superficial vein thrombosis of the limbs</i> | 27 | 20 (2.8%) | 0.44 |
| <i>Pulmonary thromboembolic events</i> | 6 | 6 (0.8%) | 0.13 |
| <i>Splanchnic venous thrombosis</i> | 3 | 3 (0.4%) | 0.065 |
| <i>Retinal venous thrombosis</i> | 1 | 1 (0.1%) | 0.022 |
| Arterial Thromboses | 45 | 40 (5.4%) | 0.99 |
| <i>Acute myocardial infarction</i> | 18 | 16 (2.2%) | 0.39 |
| <i>Ischemic stroke</i> | 11 | 11 (1.5%) | 0.24 |
| <i>Transient ischemic attack</i> | 10 | 10 (1.4%) | 0.22 |
| <i>Splanchnic arterial thrombosis</i> | 6 | 3 (0.4%) | 0.065 |

Supplemental Figure 2: Thrombosis-free survival comparison between patients with at least one CSS (dashed line) and patients without CSSs (continuous line) across all the risk categories.

| | | | | | |
|------------|------------|------------|------------|-----------|-----------|
| <u>95</u> | <u>72</u> | <u>61</u> | <u>37</u> | <u>26</u> | <u>16</u> |
| <u>42</u> | <u>28</u> | <u>24</u> | <u>18</u> | <u>8</u> | <u>5</u> |
