

Table

**Table 1. The number of species projected to lose all suitable habitat due to climate change**

	Amphibians	Reptiles	Birds	Mammals
RCP2.6	309 (5.9%)	489 (5.5%)	93 (1.2%)	229 (5.4%)
RCP4.5	456 (8.7%)	686(7.7%)	150 (1.9%)	312 (7.4%)
RCP6.0	495 (9.4%)	742 (8.4%)	180 (2.3%)	346 (8.2%)
RCP8.5	676 (12.9%)	1042 (11.7%)	261(3.3%)	460 (10.9%)

Note: Percentages in the brackets were calculated as the number of species projected to lose all suitable habitat divided by the total number of species modeled in this study for each taxonomic group: 5,253 amphibians, 8,871 reptiles, 7,856 birds, and 4,222 mammals.
