

Table 3. Multivariate Cox regression analysis of clinical variables associated with events.

Variable	HR	95% CI	p
Evolocumab	0.39	0.15-0.99	0.047
Gender	0.73	0.51-1.07	0.409
ALT at 3 months	1.04	0.93-1.01	0.057
Number of bypasses	0.99	0.70-1.41	0.969
Arterial hypertension	0.45	0.21-0.98	0.044
EUROSCORE II	2.49	1.14-5.40	0.021
Malignancies	1.45	0.21-9.69	0.702
Previous stroke	13.46	1.71-36.2	0.001
Vascular disease	0.14	0.02-1.71	0.128
Previous CABG	0.26	0.03-2.59	0.547
Myocardial infarction	0.54	0.14-2.06	0.368
Smoke	1.44	0.56-3.67	0.452
Diabetes	0.96	0.42-2.18	0.929
BMI	0.96	0.85-1.08	0.520

The table shows the hazard ratios (HR) and 95% confidence intervals (CI) for various clinical variables, including Evolocumab treatment, comorbidities, and other clinical factors, in relation to the risk of adverse events. (**ALT**: Alanine aminotransferase; **CABG**: Coronary Artery Bypass Grafting; **BMI**: Body Mass Index)
