Data are shown as weighted percentages and unweighted sample sizes.

Supplementary File 3: results for men

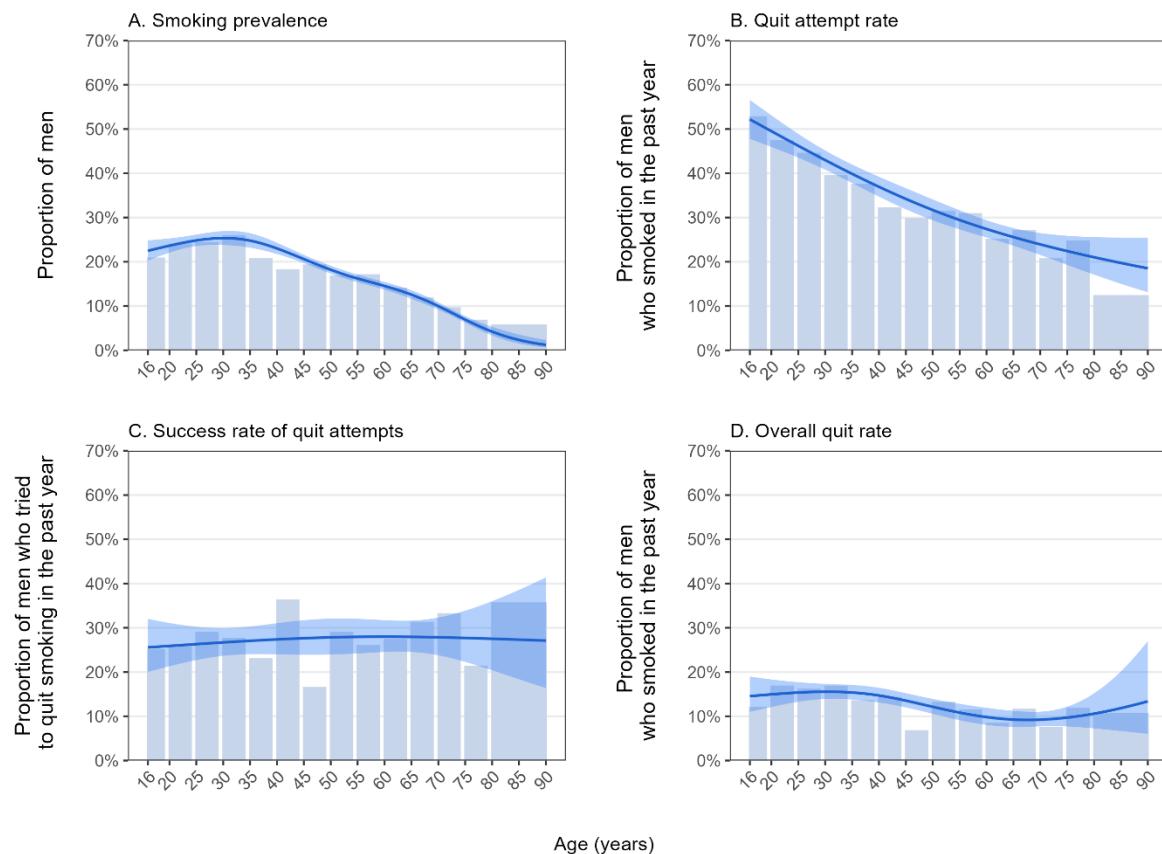

Figure S1. Age-specific estimates of smoking and quitting behaviours among men (≥16y) in Great Britain. Lines represent modelled weighted prevalence by age, modelled non-linearly using restricted cubic splines (see **Supplementary File 1** for details of model selection). Shaded bands represent 95% confidence intervals. Bars represent unmodelled weighted prevalence estimates within age bands (also presented with 95% CIs in **Table S9**). Unweighted sample sizes by age are provided in **Table S5**.

80	4.2 [3.3–5.3]	21.0 [17.1–25.6]	27.5 [20.4–36.0]	10.6 [7.3–15.2]

CI, confidence interval.

¹ Among men.

² Among men who smoked in the past year.

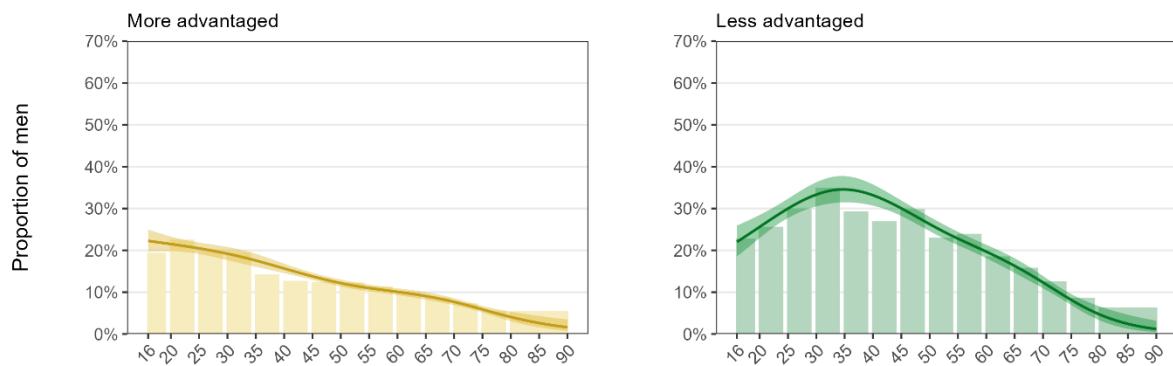

³ Among men who tried to quit smoking in the past year.

⁴ Predicted weighted estimates for individual years of age from logistic regression models with age modelled using restricted cubic splines (see **Supplementary File 1** for details of model selection). Note that the models used to derive these estimates included data from participants of all ages.

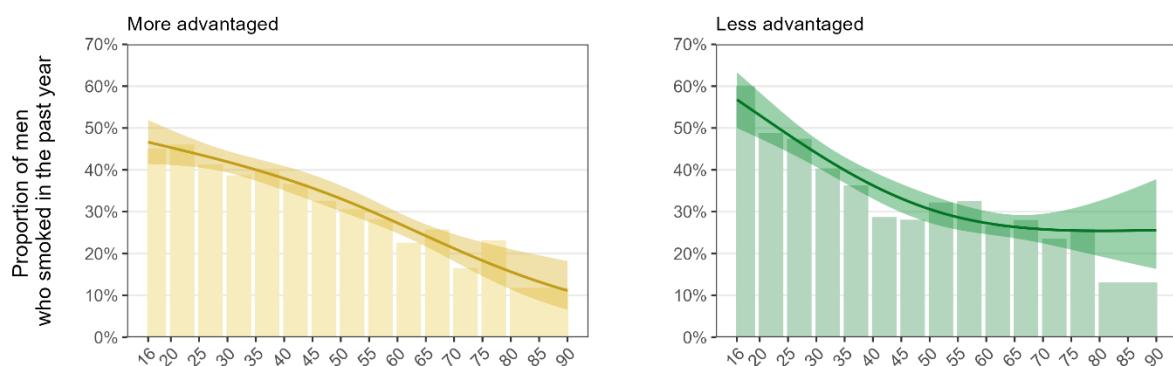

Unmodelled weighted estimates within age bands are provided in **Table S9**.

Supplementary File 3: results for men

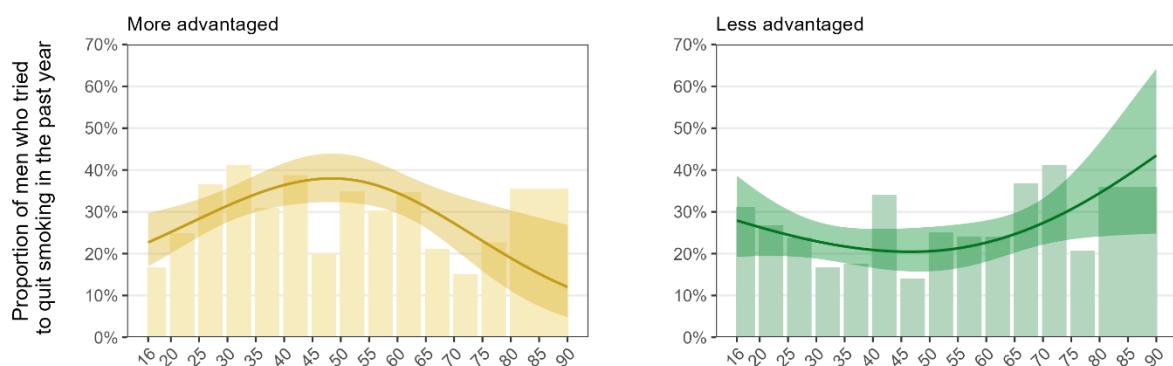

A. Smoking prevalence

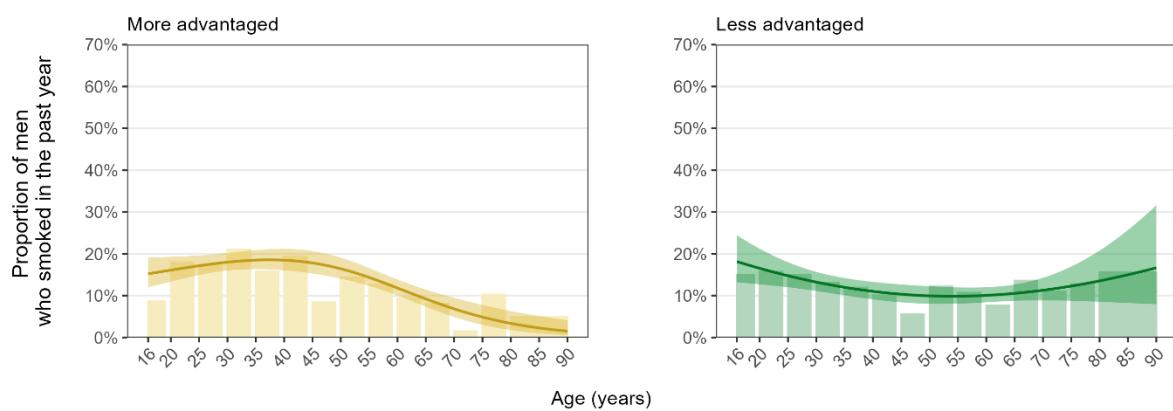

B. Quit attempt rate

C. Success rate of quit attempts

D. Overall quit rate

Supplementary File 3: results for men

Figure legend on next page.

Supplementary File 3: results for men

Figure S2. Age-specific estimates of smoking and quitting behaviours by socioeconomic position among men (≥ 16 y) in Great Britain. Lines represent modelled weighted prevalence by age modelled non-linearly using restricted cubic splines (see **Supplementary File 1** for details of model selection) and occupational social grade (ABC1 = more advantaged; C2DE = less advantaged). Shaded bands represent 95% confidence intervals. Bars represent unmodelled weighted prevalence estimates within age bands (also presented with 95% CIs in **Table S10**). Unweighted sample sizes by age are provided in **Table S5**.

CI, confidence interval.

¹ Among men.

² Among men who smoked in the past year.

³ Among men who tried to quit smoking in the past year.

⁴ Occupational social grades ABC1 = more advantaged, C2DE = less advantaged.

⁵ Observed weighted estimates within age bands. Sample sizes are provided in Table S5; note small denominators for some estimates (e.g., quitting outcomes in older age bands).
