

(3) Supplemental figure 3

The Comparison in non-culprit vessels between VL and L groups excluding with $LDL-C \geq 70mg/dl$ and $Lp(a) \geq 30mg/dl$

(A) The changes in maxLCBI_{4mm} values of non-culprit vessel at baseline and follow-up

(B) The presence of plaques with maxLCBI_{4mm}≥400 at baseline changed maxLCBI_{4mm}<400 at follow-up

(C) The presence of plaques with maxLCBI_{4mm}<400 at baseline changed maxLCBI_{4mm}≥400 at follow-up
