

PERCEPTION QUESTIONNAIRE

	TOTALLY AGREE	PARTIALY AGREE	INDIFFERENT	PARTIALY DISAGREE	TOTALLY DISAGREE
1. The use of the Deliberate Practice in Rapid Cycles method facilitated the learning of the addressed topic.					
2. I felt comfortable performing the requested tasks from a technical standpoint.					
3. I felt comfortable performing the requested tasks in a simulated environment.					
4. Immediate feedback after errors facilitated the acquisition of the practiced skill.					
5. Receiving feedback in front of others made me feel embarrassed.					
6. Repeating the task after feedback positively contributed to the learning of the skill.					
7. Prior to the simulation, I felt confident in managing emergency care for patients in status epilepticus.					
8. Working in a team at the simulated station impaired my learning.					
9. Waiting for other teams to simulate the station took longer than necessary.					
10. After the simulation, I feel better prepared to assist a patient with status epilepticus in an emergency.					
11. Simulation using the Deliberate Practice in Rapid Cycles method facilitated learning regarding the systematization of care.
