

Yang Liao¹, Chuan Liu^{1*}

Western blot analysis of LDS1 and GAPDH protein levels. The top panel shows LDS1 protein levels, with bands at approximately 110 kDa for siCon, siLDS1-1, and siLDS1-2. The bottom panel shows GAPDH protein levels, with bands at approximately 37 kDa for siCon, siLDS1-1, and siLDS1-2. Molecular weight markers are indicated on the left of each panel.

Vector			pPRAC			
siCon	siLDS1-1	siLDS1-2	siCon	siLDS1-1	siLDS1-2	
						LDS1
						GAPDH
