

A

6 months follow-up

B

2 years follow-up

C

2 years follow-up

D

2 years follow-up

Additional file 9: Absolute follow-up KOOS and EQ-5D scores. **A)** Total KOOS score and scores of the individual KOOS subcategories 6 months and **B)** 2 years postoperatively. No differences were found between patients with an isolated ACL rupture and patients with concurrent meniscal injury. **C)** EQ-5D sum score and the **D)** self-reported health score 2 years postoperatively. No differences were found between the IAR and AR+CMI groups. KOOS 6 months follow-up: n=14 patients (IAR: n=4, AR+CMI: n=10); PROMs 2 years follow-up: n=12 patients (IAR: n=3, AR+CMI: n=9). Horizontal and vertical bars represent mean and standard deviation, respectively. KOOS = Knee Injury and Osteoarthritis Outcome Score; QoL = Quality of Life; IAR = isolated ACL rupture; AR+CMI = ACL rupture + concurrent meniscal injury. ns = not significant.
