

SUPPLEMENTARY FILE 1

Major events in each of the PEEZ's MBRs that were detected using average daily CMEMS OSTIA values.

* Events are arranged chronologically according to start dates and are assigned event numbers accordingly within the PEEZ.

** Events are also assigned numbers to denote ascending order accordingly within the MBRs they are detected in.

*** Note that events are named by using the marine region they are detected in and followed by the year they occur (if more events occur in a single year, they are further specified with a letter). Additionally, only events from Category II (strong) to Category IV (extreme) are named accordingly. Both guidelines are taken from Hobday et al. (2018), Schlegel and Smit (2018), and Schlegel et al. (2021).

**** Events greater than the moderate category are highlighted in a **bold font face**.
