The list of supplementary Tables

Table S1. Sequencing quality metrics of transcriptomic sequencing (RNA-seq) data
Table S2. Sequencing quality metrics of Assay for Transposase-Accessible Chromatin (ATAC) using sequencing data
Table S3. Sequencing quality metrics of whole genome bisulfite sequencing (WGBS) data
Table S4. Sequencing quality metrics of chromatin immunoprecipitation sequencing (ChIP-seq) data
Table S5. Sequencing quality metrics of high-throughput chromosome conformation capture (Hi-C) data
Table S6. The list of tissue-specific chromatin states
Table S7. Functional enrichment of tissue-specific active enhancers (EnhA) via rGREAT
Table S8. Motif enrichment of tissue-specific active enhancers (EnhA) via HOMER
Table S9. Identification of development state-specific chromatin states
Table S10. Functional enrichment of development state-specific chromatin states via rGREAT
Table S11. The list of differentially methylated regions comparing a targte tissue with the others via wgbs_tools
Table S12. Functional enrichment of tissue-specific differentially methylated regions
Table S13. Motif enrichment of tissue-specific unmethylated regions
Table S14. Performance metrics of ChromBPNet models across tissue contexts
Table S15. The list of SNPs showing allele-specific effects on epigenomic activity
Table S16. The list of allele-specific regulatory variants identified in this study overlapping trait QTLs curated in CattleQTLdb[1] (last accessed on March 18, 2025)
Table S17 GWAS fine-mapping results using regulatory magnitude as prior wright.
Table S18. GWAS summary statistics used in comparative analyses
