

Supplementary Figure 4. Correlation between serum marker concentrations and different neurological functions. a Concentration differences of ANXA10 under three different neurological function states, which gradually increased from the normal state to PNO ($P < 0.001$). b Protein concentration trend of NSE ($P < 0.05$). c Protein concentration trend of Tau. d Protein concentration trend of NfL ($P < 0.05$). e Protein concentration trend of IDI2, with no significant difference.
