To whom it may concern,

The project "The Influence Path of the Homogenization Management Level of Medical Services in County Medical Consortiums on the Medical Service Capacity of Township Health Centers" (researchers: Dai Yue, Xue Dongyu, Li Wenjie) focuses on the question of "how to clarify the influence mechanism of the homogenization management level of medical services in county medical consortiums on the medical service capacity of township health centers and put forward optimization countermeasures for the construction of county medical consortiums". This is an empirical study in the field of health management, combining quantitative analysis with qualitative research. The information and data in the research content are derived from routine research materials including questionnaires filled out by research subjects, semi-structured interview records, operation data of county medical consortiums and township health centers, expert consultation opinions, and relevant materials from administrative departments. All data were anonymized or de-identified prior to collection, storage, and analysis, with personal information and institutional data managed separately to minimize the risk of personal privacy and institutional information disclosure. The study involves no commercial interests and has no connection with administrative assessment, rewards or punishments. Research subjects can withdraw from the study unconditionally at any time. Thus, the study qualifies for exemption from ethical review.
