

Supplementary information

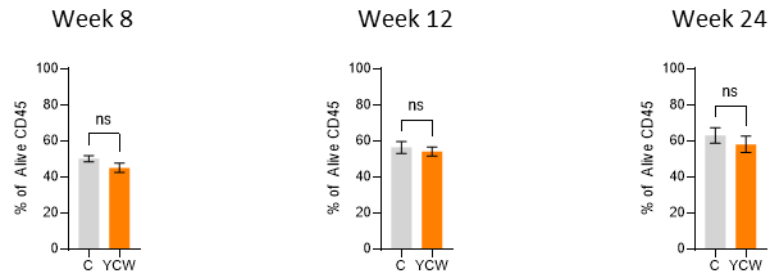

Figure S 1: Thrombocyte frequency among PBMC. Thrombocytes were gated for viable single leukocytes, CD45⁺, and negative for the other markers used in the immunophenotyping panel from Figure 1A. Data are presented as means $\pm$ SEM (N=10-12). Mann-Whitney test was applied for statistical analysis (* $p \leq 0.05$, ** $p \leq 0.01$, *** $p \leq 0.001$, **** $p \leq 0.0001$).

Chickens' age	Vaccine	Vaccine type (Live/Inactivated)
1 day	Vaxxitek (HVT+IBD+ND)	Live
	Marek	
	IB Ma5	
	IB 4/91	
1 week	Avipro Salmonella DUO	Live
2 weeks	NDV-clon	Live
3 weeks	IB primer	Live
5 weeks	Rhino CV	Live
6 weeks	Avipro Salmonella DUO + NCD	Live
8 weeks	IB QX	Live
10 weeks	ILT and AE+PD	Live
14 weeks	Nobilis multi (IB+ND)	Inactivated
16 weeks	Avipro Salmonella DUO	Live
