

Basic FGD Guide With Nurses to Understand Similarities and Differences Between Male and Female TB patients.

21 October 2021

Part 1

1. IAT Experience:
 - a. What are your initial impressions of the test?
 - b. Were you able to understand and follow instructions?

Part 2

1. Describe a typical TB patient from testing through treatment completion.
2. Are there any patient behaviors or characteristics that may lead you to suspect that a particular patient may be at risk of being loss from care after starting TB treatment?
3. What do you do in this case? How might you pre-empt any problems?
4. Please think back to a patient that was loss from care and treatment. What were their characteristics as a patient?
5. What makes a TB patient difficult to clinically care for?

Part 3

6. How would you describe a typical:
 - a. Male patient?
 - b. Female patient?
7. How would you describe a typical:
 - a. Good patient?
 - b. Bad patient?

Instruction: Using the post-its, write down all the words that you associate with a good patient? Bad patient?

Part 4
