

Supplemental Figure S1

Supplemental Figure S2

Supplemental Figure S1: Endogenous protein expression level of HN30 and PCI37A cells.

Endogenous protein expression level of HN30 and PCI37A lysates was determined by immunoblot analysis with GAPDH as loading control.

Supplemental Figure S2: AXL mRNA expression in HN30-AXL and PCI37A-AXLC1 and -AXLC2 cells.

AXL mRNA expression in HN30-AXL and PCI37A-AXLC1 and -AXLC2 cells was detected by qPCR and normalized to AXL expression in their vector cells. (n=3 in three independent experiments).
