

Supplementary Figure 1. rCD5L administration elevated serum inflammatory cytokine level in CLP-induced sepsis. Cytokine levels in serum from CLP-treated mice treated with or without rCD5L (2 μ g/injection) were measured by LEGNDplex™ assay at 24 h after injection. Sham-WT was set as control group. **(a,b,c,d,e)** Fold change of concentration of IL-1 β , IL-6, TNF- α , IL-10 and IFN- γ in serum. (n=3 per group) Results are representative data from two independent experiments. Data are presented as the mean \pm SEM and analyzed by t-test.
