

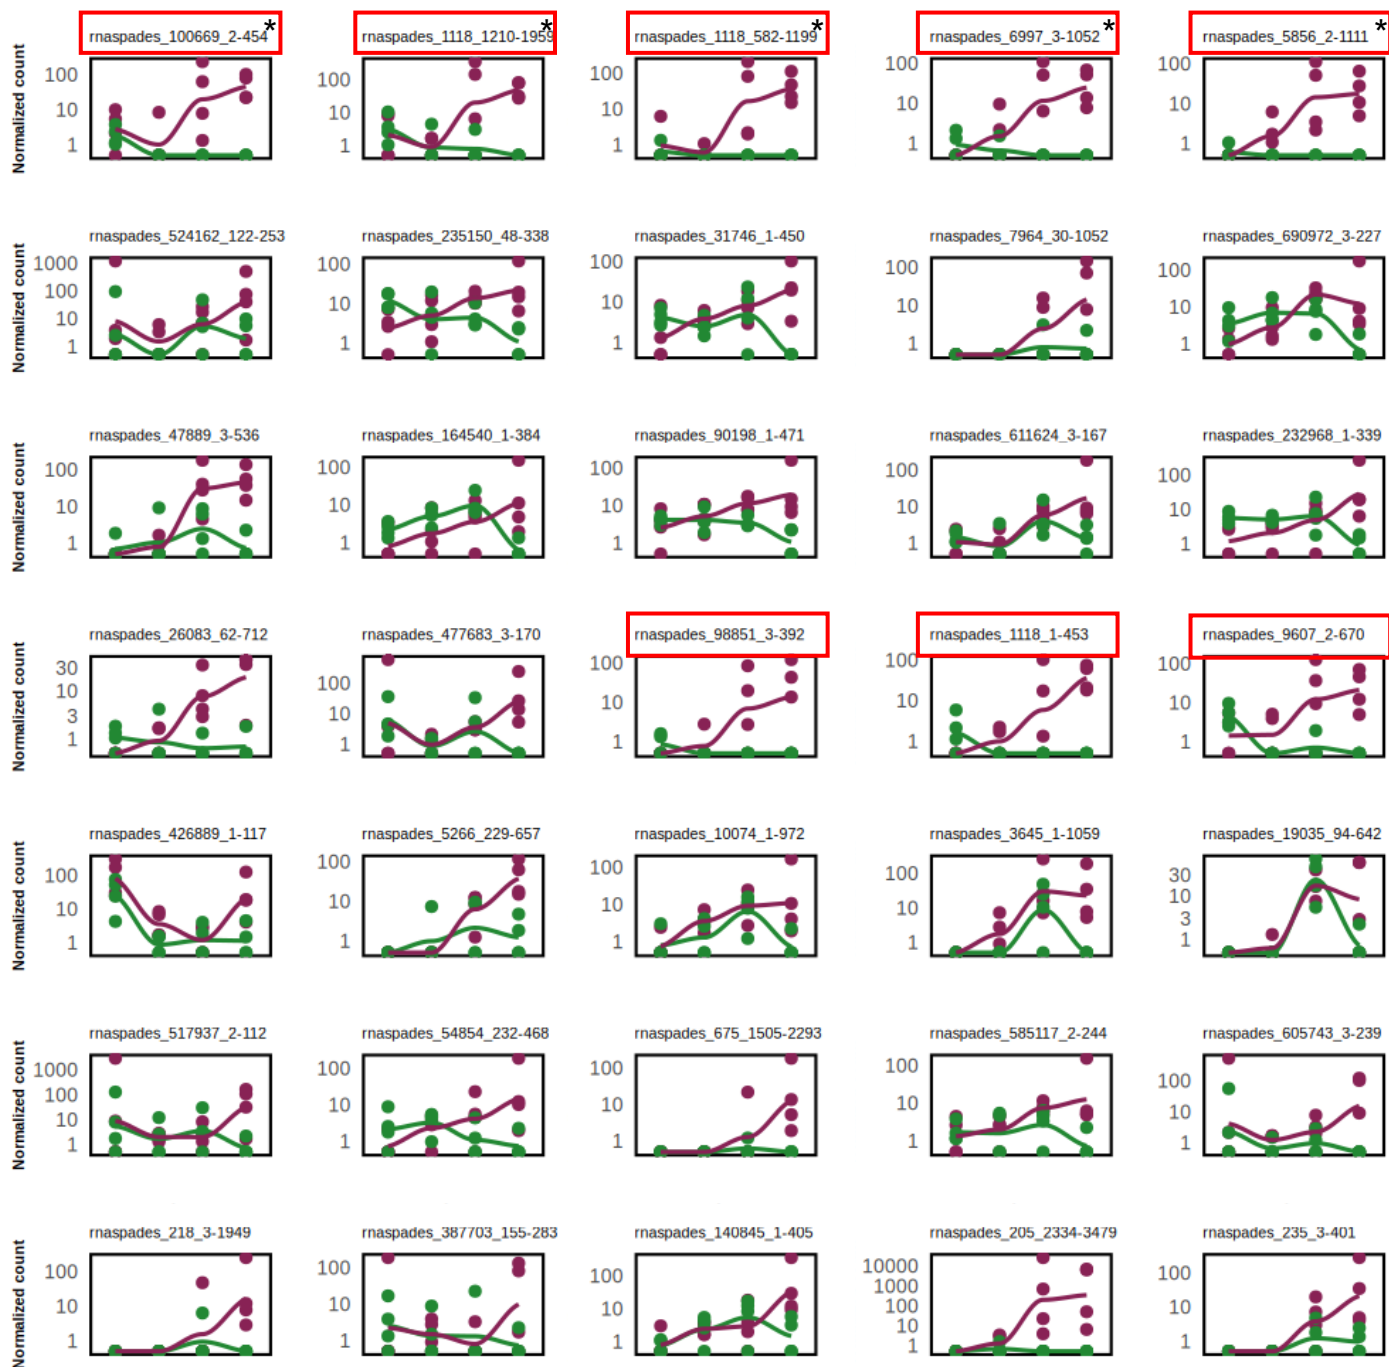

**Figure S4.** Expression dynamics of the 35 ORFs that were upregulated in BR8 vs B8 and that were absent or present at low levels in non-suppressive rhizosphere samples (conditions BR1 and BR4). B (green): soil cycled with sugar beet in absence of *R. solani* remained conducive; BR (magenta): soil cycled with sugar beet in presence of *R. solani* became suppressive. The ORFs assigned to *Fluvicola* are highlighted in red. The asterisks indicateso ORFs significantly upregulated in both BR7 vs B7 and BR8 vs B8.
