

PRISMA-style flow diagram for literature selection

Search strategy: ("Anastasis"[tiab] OR "Cell Death Reversal"[tiab] OR "Apoptosis Reversal"[tiab] OR "Reversal of Apoptosis"[tiab] OR "Blebbishield Emergency Program"[tiab]) AND 2006/01/01[PDAT]:2026/05/06[PDAT].

Figure S1. PRISMA-style flow diagram for literature selection. A total of 106 records were identified through the PubMed search. No duplicate records were identified because a single database was used. After screening by publication type and bibliographic completeness, 5 records were excluded because they were conference abstracts, editorials, letters, comments, news items, or records with insufficient bibliographic information. Finally, 101 PubMed-indexed journal articles and reviews were included in the bibliometric analysis.
